

Get real-time insights across the factory floor

Avnet's Smart Factory solution, built on Microsoft Azure, helps manufacturing businesses optimize output, quality and consistency. Sensors connected to mobile apps and a centralized dashboard enable real-time monitoring of production and performance on your factory floor. You can also collect and analyze data across machines to streamline processes and get the insights you need to make informed, timely decisions.

Remote monitoring

Dashboards accessible via mobile apps help factory floor supervisors monitor the factory environment in real-time from anywhere.

Increased efficiency

Machine learning enables devices to alter their course without the need for human intervention, saving time and resources.

Easier compliance

Wireless sensors enable continual monitoring of key environmental variables to ensure quality standards are met.

Smarter factory management

A global packaging manufacturer serving the food and consumer products industries had to find an efficient way to adhere to stringent compliance requirements. With Avnet's Smart Factory solution, they were able to easily monitor and manage the factory environment in real time to ensure optimum product quality.
