Endpoint Monitoring

Syvir Monitor is a cloud tool that helps ensure your computer systems are running reliably and that you spot any problems before your systems go down.

Syvir Cloud Monitoring

Syvir Cloud Hardware classes monitor the diagnostics of your endpoints for hardware faults and can warn you in advance if a particular component has a fault or issue.

Manage your endpoints from anywhere in the world.

Syvir Monitor uses AI Diagnostics and is specially designed for use by companies, MSPs and organizations.

The Syvir logo is located in the bottom right corner of the image. It consists of the word "Syvir" in a bold, red, sans-serif font. The letters are stylized, with the 'S' and 'Y' having a unique, blocky appearance. The background of the entire image is a dark teal color with a complex, layered pattern of circuit board traces and components, creating a high-tech, digital aesthetic.

Syvir

Why use Syvir monitoring tools?

Highly customizable.
Unlimited scalability.
Cloud based...Just use your favourite device
with a web browser.

Our cloud-based SaaS give you the flexibility to
choose a monitoring solution that best fits
your requirements.

We handle the hosting which gives you piece of mind...

Scalable, reliable hosting environment.
Instant access to new features.

You focus on your endpoints.. we do the hosting...

Setup requires no dedicated hardware.
No need to find a machine with capacity or order new hardware.

Syvir cloud-based solutions are billed monthly.
You can switch between subscriptions anytime.. upscale or downscale.

You can cancel your subscription at any time.

Syvir Monitor - Diagnostics

Monitors your endpoints for hardware faults

Syvir Monitor Diagnostics sensors are the easy way to find out if any of your endpoints have hardware issues. Endpoints are automatically scanned at hourly or longer intervals.

Data is transferred from the probe to the Syvir cloud. You can then view diagnostic data from the machine. Faults can be looked up with built in AI.

Syvir Monitor - Diagnostic sensors enables you to do automatic diagnostic checks on endpoints for hardware faults. Combines AI to find out known issues with your hardware when a fault is found. (Subject to component name returned).

Syvir Monitor - Inventory

Monitors important inventory hardware for changes.

Syvir Monitor - Inventory monitors your PCs hourly to spot any inventory problems and reports to you if something is found.

Alerts tell you instantly when Syvir Monitor - Inventory has spotted an inventory issue with your Network and remote Windows PCs.

Syvir Monitor - Inventory produces comprehensive reports on your PC and server Inventory.
