

# Continuous Security Monitoring

eCyLabs Continuous Security Monitoring (eCyCSM) to identify cyber attacks and data breaches in your website. eCyLabs has a collection of threat hunting bots to proactively analyze security threats as an outsider and provide a 360 degree view of your application security posture from code to cloud.

Detect anomalies in your applications using eCyCSM and view all your servers from a single dashboard. eCyLabs OverWatch provides continuous human analysis, to predict exploits in advance and alert for threats that need your attention. Through eCyCSM, we offer unparalleled expertise and tools to identify emerging threats and vulnerabilities, augmented by AI-powered recommendations for effective remediation.

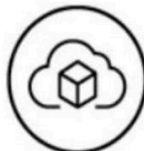

eCyCSM's threat hunting leverages various specialized bots like OWASP Detections, Cryptographic Weakness Scanners, DAST, code repository scanners, and outdated component detectors. Our core objective revolves around continuous surveillance, meticulous analysis, and proactive guidance against intricate threat landscapes within client environments.
