

# Healthcare Asset and Maintenance Management system H-AMM bundled with HQMS

EzyPro H-AMM – the faster, simpler way to transform healthcare Asset and Maintenance activities and enable informed decision - making.

It improves productivity, response times and communication.

## What is EzyPro H-AMM?

A computerized maintenance management system (CMMS) for Healthcare maintenance activities, work order management, asset tracking, inventory and more!

## Why customers use EzyPro H-AMM

- To implement superior task handling between users, managers and technicians.
- To make data-driven decisions that deliver better patient care and maintenance performance.
- To keep the maintenance team focused on the right work, quick response and get real time asset status.

## Asset Register and Tracking

- View asset hierarchies and groups
- QR Code embedded asset tracking
- Easily retrieve asset history
- Initiate work orders with ease

## Maintenance Activities

- Reduce downtime due to a proactive and data-driven approach to maintenance
- Support technicians to perform better and faster as per best practices
- Access the system anywhere from mobile devices and cloud

## Dashboards

- Establish, benchmarks and monitor KPIs
- Control maintenance backlog and track service level adherence
- Track all workorders from one place and drill down to details

**“Implementing EzyPro H-AMM has transformed our Asset and Maintenance Management,** we integrated it with our Hospital Quality Management system giving us significant gains in performance of diagnostic procedures, therapy and treatment equipment readiness including reliability of monitoring of patients.
