REDBIT

Azure Cloud
Adoption Discovery

Our 4 week Assessment

This Cloud Discovery will determine a plan of action on how you can leverage the Microsoft Azure Cloud technologies to help modernize and optimize your business and processes.

As a Microsoft Gold Partner RedBit Development works closely with your team and organization to plan out how you can transform your operations to take advantage of Microsoft Azure & Cloud technologies. Whether you are looking to bring some inhouse servers to the cloud, modernize existing applications, digitizing manual paper-based processes, or just looking to start your digital journey to the cloud RedBit's Azure Cloud Adoption Discovery is the right start.

With your business expertise and RedBit's experience this 4 week assessment will explore options which will increase productivity, reduce costs, and help your teams streamline their processes. This Assessment will help you manage the challenges of modernizing and optimizing your workplaces.

Step 1 - Learn

We look at your organization's technology infrastructure and, most importantly, operational processes to understand your current pain points. Here we learn about your business, your needs and your technology.

This step will see us performing the following activities:

- Listen to and learn from employees and stakeholders
- Review documentation
- Understand the current IT infrastructure
- Find possible vulnerabilities

Step 2 - Assess

Building off of the Learn step we move into identifying gaps and assessing your options.

- Find gaps and areas for improvement
- Review technical feasibility
- Identify potential roadblocks

Step 3 - Recommend

In this final step we work with your team to outline a plan of the recommendations, providing you with the information needed to make informed decisions with a clear journey on how to achieve your goals.

- Provide recommendations on which Microsoft Cloud technologies are a fit for your business
- If relevant - building a prototype of what can be achieved
- Provide possible areas where automation can be used
- Provide a execution plan road mapped out for your needs
- Provide an accurate estimate and timeline of work to be done
