Cloud and OS are simple, talk with us….

About GraspIT & MobyLink

We strive to add value to our clients by contributing to responsible and sustainable practices. We approach every project like it's the first of many collaborations where long-term client satisfaction and partnership is at the core of every decision we make. From organisational speed and agility as a requirement to optimal and efficient decision making across organisations, our technology offers great flexibility and adaptability in today's rapidly changing business environment, providing numerous benefits in supporting our business model which includes but is not limited to: Infrastructure as a Service – IaaS, Platform as a Service – PaaS, and Training as a Service – TaaS. We welcome anyone who's interested, whether they are an enterprise or a small business.

What we Offer...

At GraspIT we are currently offering two solutions, our MobyLink platform and our Content Management Engine (CME).

The MobyLink platform is both an Agile Foundation and a Cloud Operating System that has its own Integrated Development Environment with standardized security (DataBoxing), development, deployment and scalability. Do you require a desktop that has all the business applications you need without the need for installation? Try out MobyLink.

Our CME is a highly secure content management system that allows users to easily customize and develop their own websites with easy to use tools, without having to worry about deployment. In terms of delivering a website, its efficiency and ease of use speaks for itself, as you'll find that you may not even have to use any code at all. Better yet, MobyLink actually has our CME built-in (CME Manager App), meaning you don't have to worry about the hassle of jumping from one cloud environment to another.

Due to MobyLink being hosted by Microsoft Azure, if you ever find that you want additional products and services that we don't provide at the moment, those may be readily available via Azure. We will also be integrating other Microsoft Platforms, those being, MS Dynamics 365, MS SQL Server, MS Office 365 and Windows 10.

See what customers are saying:

"GraspIT demonstrated a clear and expert understanding of business and commercial processes and the application of its platform technology to automating and validating volume data processing. Ian Millsom as lead consultant on the project was always professional and available both to me and my staff during what was an incredibly stressful period, and I am pleased to recommend both the company's technology and expertise, and its service levels."
