

webMethods.io B2B

Accelerate the speed of doing business

Simplify how you exchange your B2B documents in the cloud—and avoid infrastructure headaches and costs. With webMethods.io B2B, built on the industry-leading webMethods Trading Networks, you can quickly transmit electronic business documents—like purchase orders, invoices and shipping notices— with customers, distributors and trading partners without any hardware investment, maintenance or upgrades.

Pay as you grow

Software AG's webMethods.io B2B is a consumption-based B2B document translation and transmission service that makes it easy to set up and communicate flexibly and reliably with your trading partners. As a pure Software-as-a-Service (SaaS) offering, you can forget about costly and time-consuming hardware and infrastructure investments, implementation and operations.

Everything's done in the cloud, so you avoid all the headaches and costs of setting up and maintaining a B2B network. Let us take care of those details while you simply:

- Host webMethods.io B2B on both AWS or Azure platforms.
- Onboard trading partners of any size—in great detail—in minutes
- Exchange business documents conveniently in the cloud
- Centrally manage important partner details, like contacts
- [Integrate B2B](#) documents directly with your back-end systems for fast processing

Key benefits

- Low TCO, no operational headaches
- Fast setup and partner onboarding
- Real-time-electronic document exchange through EDI (UNEDIFACT, ANSI X12, EANCOM, ODETTE, UCS, VDA, VICS, TRADACOMS) as well as XML, cXML and Flat files.
- RosettaNet support
- Administrator, developer and user role-based access.
- Utilize AS2, AS4, SFTP and HTTP communication protocols.
- Secure transmission and translation for Advanced Shipping Notices (ASN), invoices, purchase orders, proof-of-delivery, quotes and more
- Scheduled data purges and unlimited transaction archive support
- Greater control with end-to-end visibility of your partner network
- Peace of mind—count on the reliable connectivity of webMethods, the industry-leading hybrid integration platform

Features

A fresh look at partner management

webMethods.io B2B introduces a UI that dramatically improves the user experience. Expect better usability and productivity through increased clarity, intuitive navigations and fewer clicks.

Onboard partners faster and improve how you manage them by using a shared administrative infrastructure. For each partner, you can define:

- Document routing information
- Processing information
- Contact details

Define and store inbound and outbound communication channels to automate and manage your partnerships, and be sure documents are sent and received securely.

Customize document types

Use webMethods.io B2B to quickly customize document types for support of priority partners who create their own versions of document standards.

Document creation, parsing & validation

Save time with deep out-of-the-box EDI support for UNEDIFACT X12, EANCOM, ODETTE, UCS, VDA, VICS and TRADACOMS document types. Document validation helps you assure data accuracy and high quality. Ensure the data you send and receive is correct and reliable and that your documents are delivered and received securely with your trading partners.

RosettaNet support

webmethods.io B2B provides out-of-the box support for the RosettaNet standard. Expect cloud-automation for partner exchange of supply-chain information in a highly scalable and secure way.

XML Document Support

Extract, build and customize XML documents from an existing schema. Submit XML documents and test to see all matching XML document types.

Add customized XML attributes

webMethods.io B2B allows you to uniquely identify any data, then use those attributes within processing rules to add powerful logic for rule execution.

Reusable rules

Reduce errors and inefficiencies by implementing consistent and reusable document processing rules. Processing rules provide flexibility in your partner communications and ensure consistent and reliable data. Additionally, any number of email alerts are triggered when process rules are evoked. This feature identifies missing invoice numbers, orders over a certain value or the need to address other attribute corrections.

Back-end integration

All trading partner data including extended fields are available to be passed through to Integration.io, enabling customized processing flows unique to your organization. Quickly tie your B2B processes to your back-end systems and orchestrate your B2B processes via webMethods.io Integration.

Manage, register multiple instances

webMethods.io B2B allows registration and management for multiple environments. Named environments (Dev, QA, Production) can be deployed and accessed through separate UIs, enabling status monitoring and asset promotion across registered environments using a robust deployment tool.

Security and encryption

webMethods.io B2B ensures transaction security through partner certificates plus SSL support for Inbound and Outbound Channels, including AS2, AS4 and SFTP. Automatic encryption/decryption adds an additional layer of assurance.

Real-time exchange

With webMethods.io B2B, you can work in real time with your trading partners, eliminating costly delays and speeding up the way you do business.

Operational visibility

Gain complete end-to-end visibility into B2B transactions across your entire trading network. Track and manage B2B transactions through analytics and a monitoring dashboard and Instantly see the status of your transactions.

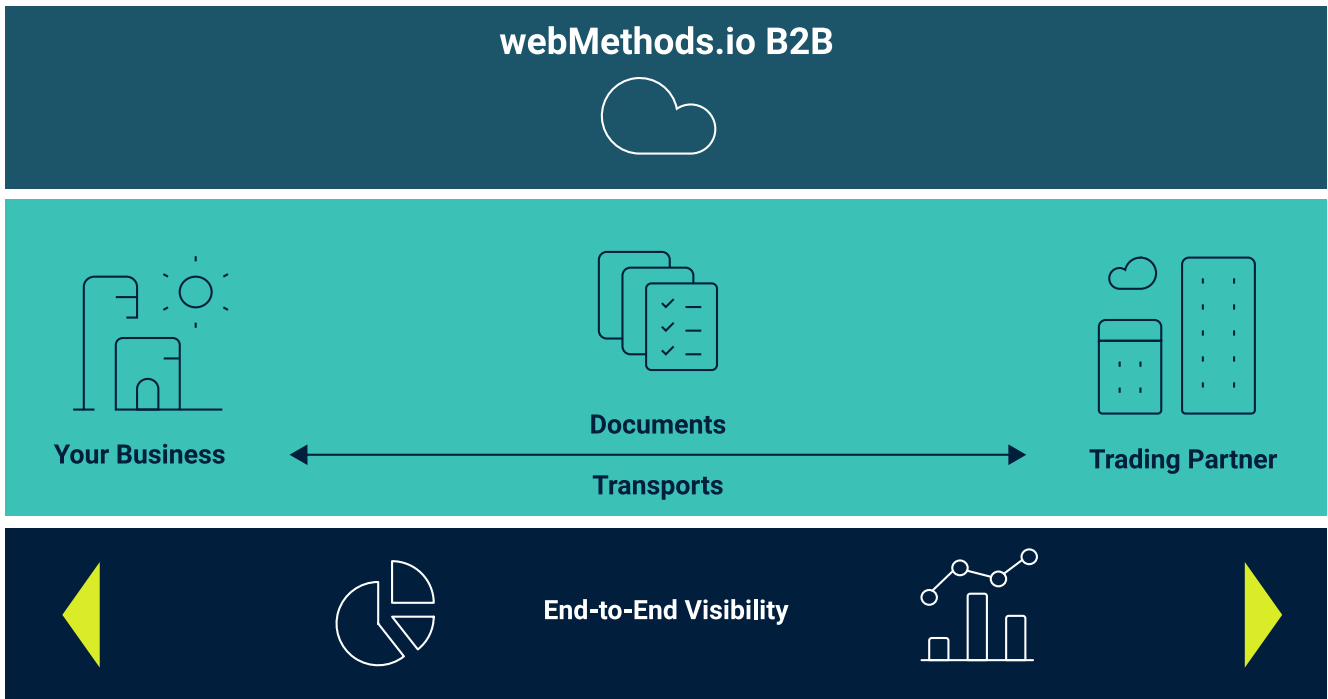

Transactions are grouped within the monitoring screen enabling the easy identification for specific groups of transactions.

Message repair & resubmit

When a transaction problem happens, fix it fast. With webMethods.io B2B, you can locate the problem's source by drilling down into transaction data, including message header and routing information as well as the message payload itself. Then, take corrective or preventive action as needed. You can easily update the transaction payload and resubmit. This saves you from having to wait on your partners to fix an issue on their side and then resend the message.

Audit and Deployment logs

A UI for administrators enables transaction log queries. Use deployment logs to show all deployment activity occurring between environments, including who deployed assets—and when.
