# Red Canary Co-Managed Microsoft Sentinel Engagement

Many security teams place Microsoft Sentinel at the center of their security programs. We designed this engagement to streamline your journey from purchase to operational excellence, providing everything from tactical deployment to security program guidance, custom SIEM content, and more.

### **Engagement Summary**

Red Canary sets you up for success with Microsoft Sentinel. We not only deploy Microsoft Sentinel for you, but we also optimize your instance according to your budget and the security value of your potential log sources. Our security experts lead your team through a security goals exercise to help you clarify your priorities, and we deliver 130+ analytics, 100+ threat hunting queries, and more into your Microsoft Sentinel instance that you get to keep in perpetuity.

### 6 weeks or fewer from start to finish

#### **DEPLOYMENT & SETUP**

We deploy and configure Microsoft Sentinel in your environment in weeks, not months, so that your team sees ROI quickly.

#### OPTIMIZATION

We rank your potential log sources by security value and recommend integrations in the context of your IT environment, security priorities, and budget, providing a cost estimate along the way.

#### SECURITY CONTENT DELIVERY

We conduct a Security Goals Exercise and implement: 130+ analytic rulesets and 100+ threat hunting queries mapped to MITRE ATT&CK; 1 custom security dashboard; and 20 automation playbooks. All of which you get to keep.

#### CLOSEOUT

We provide an Engagement Summary of work completed and a prioritized list of recommendations that will help you get the most value from Microsoft Sentinel.

#### **Benefits**

## Accelerate time to value

Avoid common and extensive delays. In weeks, not months, our Microsoft experts setup and configure Microsoft Sentinel from scratch according to your needs.

## Spend more efficiently

After our consultative discussion and the cost estimate we provide, you'll have confidence that your spending aligns to your budget and goals.

# Stop threats you'd otherwise miss

The goals exercise, analytic rulesets, specific threat hunting queries, workbooks, and automation playbooks work together to deliver the security value you're seeking from Microsoft Sentinel.
