

PRIME® Healthcare Provider Data Validation

*Ensuring compliance,
great member
experiences*

Many health insurance plans and health systems struggle to keep provider directories accurate and up to date as mandated by Fed. Through PRIME®, Atlas Systems leverages its extensive knowledge of databases and platforms to take on this difficult but all-important assignment. PRIME® works closely with IT, Provider Ops, Member Experience and Compliance teams of Payors to deliver a real-time view of your trends in provider data accuracy – accessible on demand through a customizable dashboard. Embedding these services in Azure platforms and services, Atlas works as a seamless extension of both payor and provider teams, ensuring regulatory compliance and great member experiences.

What we offer

1st-person data validation

Atlas reaches out directly to health systems and providers to confirm dozens of crucial data points – from locations to specialties to languages spoken. We tailor our validation to your most important challenge areas, delivering up-to-the-minute information directly to your database and through our intuitive online dashboard.

Ongoing directory monitoring

Through PRIME, Atlas offers regular refreshing of your provider information, assuring that it remains compliant with

federal and local regulations – and delivers reliable information to members. We capture such important milestones as expired licenses and registrations, sanctions, and deceased providers.

Real-time data access

Clients can view their latest PRIME data on demand through our intuitive online dashboard. Customized to client needs, the dashboard delivers a real-time view of accuracy levels from many perspectives, as well as updates on how the validation project itself is proceeding. Our platform is also fully FHIR compatible.
