

MICROSOFT TEAMS VIDEO SYSTEM

MAKE CONFERENCE ROOMS ENGAGING WITH VIDEO SYSTEMS

Now you can both increase engagement in your meetings and simplify the user experience with cost-effective equipment to create a video room. The solution is based entirely on Microsoft Teams within Office365.

Because the solution is fully integrated with Microsoft Teams, users recognize themselves, can join a one-click meeting, and can easily communicate with other users who have Teams on PC, Mac, mobile, or other rooms.

The solution makes it easy for users to invite, connect to, and manage video meetings.

The equipment can consist of a table-placed touch panel as well as a camera with speakers and microphone that is placed together with one or two wall screens of any size. The equipment is available in 3 different packages for small and medium-sized conference rooms.

In order to get a smooth introduction, Telia's technicians are there to help you install, configure and ensure that you get the maximum benefit from the system.

BENEFITS WITH TEAMS ROOM SYSTEM

SIMPLICITY	The solution includes a custom Teams client, so users recognize themselves when booking and connecting
JOIN WITH ONE CLICK	Booking is done through an Outlook calendar or directly in Teams. Joining the meeting with one click on the Touch panel.
INTEGRATED WITH TEAMS	The device uses the Teams meeting service, which is available in most Office365 plans, i.e. no additional video service is needed!
ANY SCREEN	One or two wall screens of any size can be used. Existing displays that support HDMI can be used.
GET STARTED FAST	Telia's technicians ensure that you get a smooth and carefree installation and fast starting distance.

Customizable hardware

Teams Video Room System consist of a camera/mic and a speaker device connected to a table-mounted touch panel. The Touch panel includes a specially designed Teams software that allows users to join a Teams meeting at the touch of a button.

The video system is available in different custom sizes from conference room sizes of up to about 10 people.

The touch panel can be installed and connected to one or two optional wall displays with HDMI output.

One screen

Two screens

Easy to use

Teams Video Systems require Microsoft Teams to be used as a meeting service, which is included in most Office365 plans. Everyone can then book the video room system via the calendar in Outlook, as well as invite the desired people to the meeting.

The meeting participants who are not present can then connect to the meeting via their Teams client in PC, Mac, smartphone, via a web browser or via another Teams Video System.

If the presenter wants to share files, documents, or presentations during the meeting, it is easy to connect a PC or Mac to the Teams Video system.

Combine with existing video rooms

If you have existing video room devices from Cisco, for example, that you wish to join Teams meetings, Telia has a separate cloud service for that. It is called Telia Teams Video Gateway and it allows you to keep the equipment for the more advanced rooms, and invest in Microsoft's fully integrated video room devices for Teams where you have more of this need.

Quick start with Telia

Whether you want to do the assembly of the hardware yourself, need remote help or to have a more comprehensive installation on site, Telia can help you.

Telia also offers an add on support agreement so that you can contact Telia's support specialists who can check how the service is doing and guide you on troubleshooting regarding the hardware.

Poly Studio X30 and X50 require the *O365 Meeting Room* license, which you can either purchase on your current Microsoft license agreement or on a new license agreement with Telia.
