

Showcase how Windows 365 unlocks enterprise hybrid work scenarios

Windows 365 Pilot

Build Intent Workshop

The Windows 365 Pilot workshop demonstrates the value proposition of Windows 365 with your decision makers. The pilot is intended to be delivered as a seven-day engagement, which includes:

- Understanding a customer's hybrid work scenarios and end-user computing goals and objectives.
- Gaining insights into a customer's physical and virtual devices landscape.
- Setup Windows 365 Cloud PC provisioning and management in the customer environment, focusing on the customer's hybrid work scenarios for a selected group of users.
- Defining joint next steps

The Windows 365 Pilot engagement is targeted at customers who would like to see how Windows 365 unlocks hybrid work scenarios in their environment.

In particular, we recommend this workshop for customers who are already using Microsoft Intune for cloud-based management of Windows devices and who are interested to start using Windows 365 broadly throughout their organization.

Windows 365 Pilot

Seven-day engagement to pilot enterprise hybrid work scenarios and to provide your workforce with access to a secure and productive desktop experience from virtually anywhere with Windows 365

Plan →

Define scope, identify stakeholders, and gather information on current and future environment and workloads to be enabled as part of the pilot.

Enable →

Identify and execute remediation activities to be able to deploy Windows 365 in the production environment.
Setup Windows 365 Cloud PC provisioning and management for a selected group of users focusing on the selected hybrid work user scenarios.

Grow →

Learn how to operate the implemented Windows 365 solution and agree on the next steps to further grow the solution within the production environment.
