

BASELINE SERIES

Microsoft Office Configuration Baseline

The CDI Microsoft Office Configuration Baseline sets a standard for the deployment of Office applications within an Organization using administrative consoles similar to the Microsoft 365 admin console.

Configuration of Office applications often go overlooked, resulting in default configurations and additional attack vectors for bad actors and bloat on end user devices. The Office Configuration baseline ensures these critical settings are not overlooked as these applications are critical to most organizations and typically are installed on a majority of devices.

The Baseline Includes:

- Inventory cleanup settings
- Office Application Deployment Configuration
- Update Configuration policy with 3 rings
- Configuration of Application preference policies
- Configuration of 133 Policies to Microsoft Security baseline recommendations
- Testing and Revision of all configurations
- Knowledge Transfer of settings and Office Configuration Portal

Why CDI?
