DunavNET – Innovative IoT solutions

- **A multidisciplinary team:** IoT, ML, software development + agriculture/livestock domain expertise
- Innovations built with the support of European Commission
- SAS Silver partner, Software AG partner

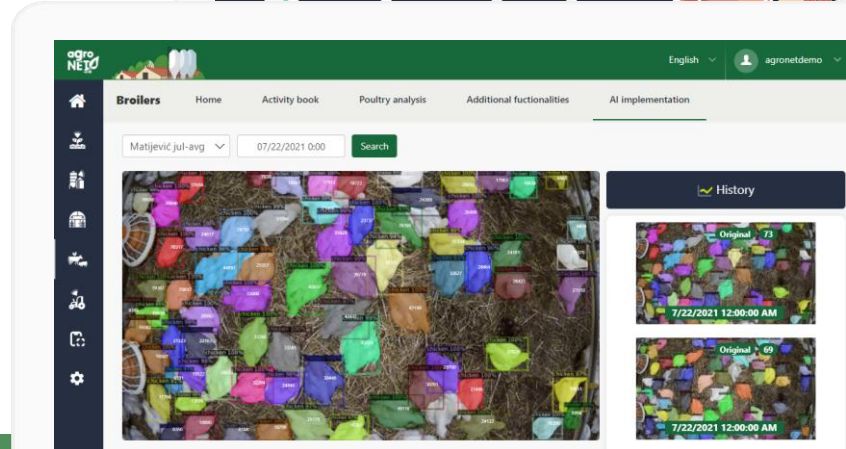

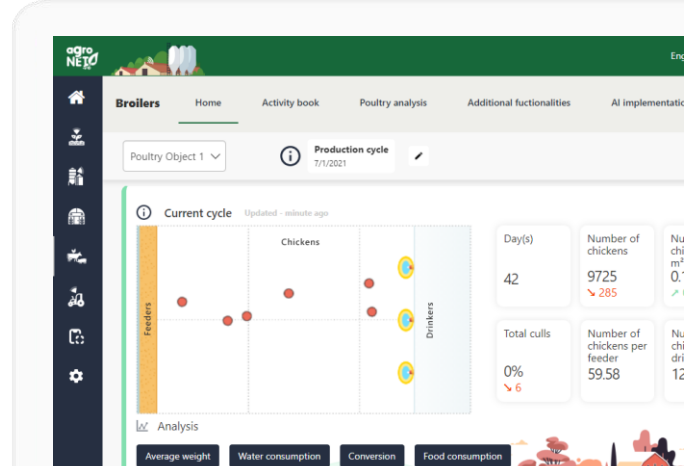

Farmers need...

- To continuously monitor environmental and operational parameters
- To ensure animal wellbeing
- To ensure transparent production
- To use workforce in the most efficient manner

- **Edge ML/AI hardware kit: the eyes, the ears, and the noses**
 - 24/7 automatic monitoring of environmental conditions
- **Edge ML/AI: the brains**
 - continuously estimate weight of the chickens
 - count the chickens, detect the dead ones
 - monitor chicken behavior
 - monitor the operational status of relevant machines (air conditioning, feeders, drinkers)

Biosafety guide, Economy calculator

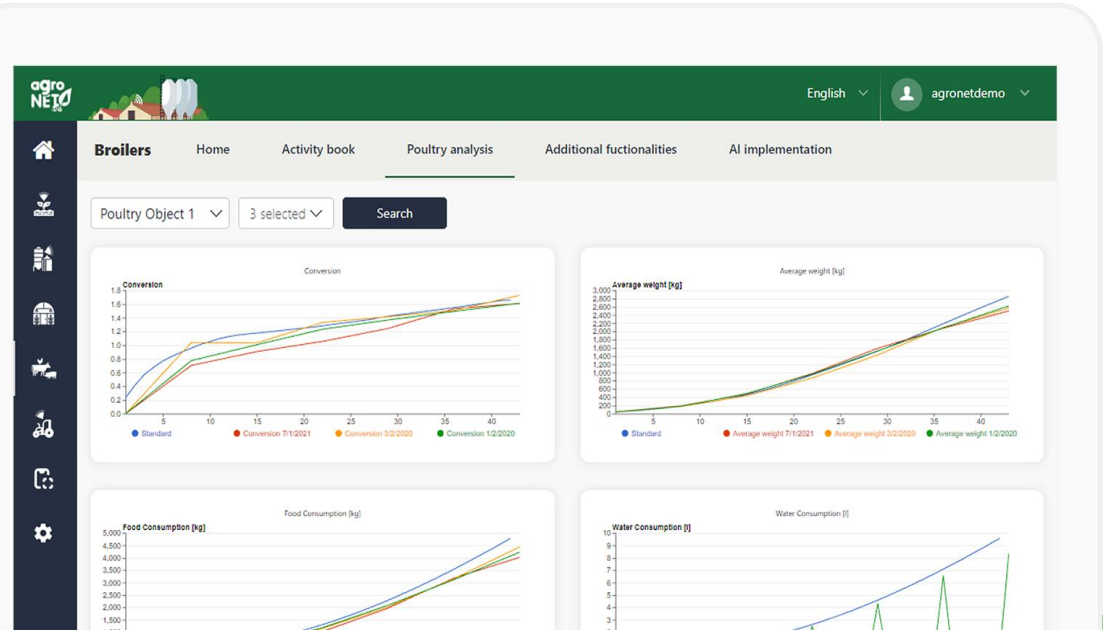

Customers

- Chicken farmers and their associations to reduce costs and increase profit.
- Food production companies with suppliers from the poultry sector to ensure quality and transparency and improve planning.
- Ag service providers (consultants, SaaS providers) to offer services more efficiently

Impact

- Decreased mortality rate by up to 20%,
- Improved feed conversion ratio (2%+),
- Manual workforce savings: 10-30%,
- Creation of the foundations for a transparent supply chain.

- Annual license per chicken
- License includes
 - Edge AI hardware configuration
 - Selected software modules and AI models
 - Connectors for integration with farm management solutions
