# dataminer.services

With dataminer.services, you gain access to innovative and game-changing solutions that support the **transition into the emerging ICT media and broadband landscape** and **empower digital transformation** programs.
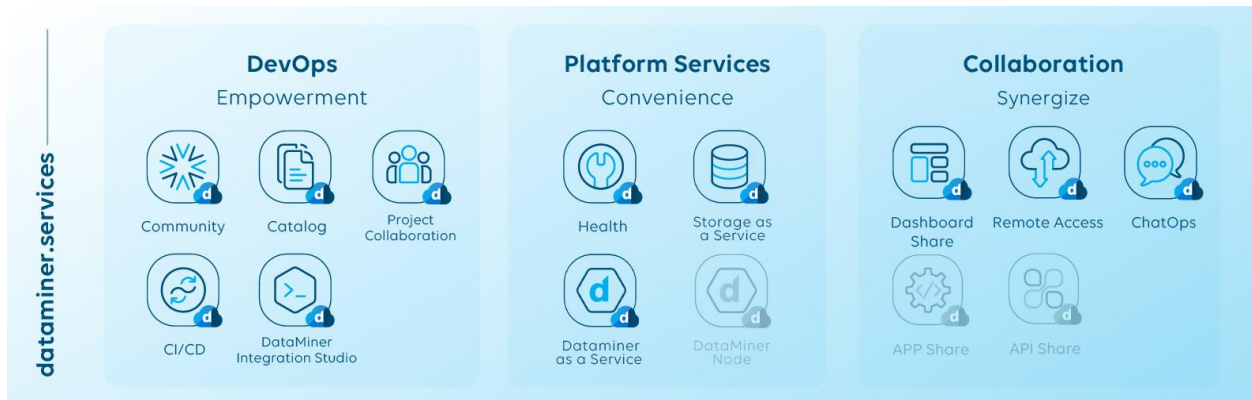

By connecting your DataMiner System to dataminer.services via a single and secured connection, you gain access to a host of additional capabilities. This opens up a new world of possibilities with respect to how DataMiner integrations are done and how interactions with partners, customers, and technology vendors take place. It's not just a service, it's a **catalyst for digital transformation**, driving your business towards a brighter, more connected future.

Different teams working on private DataMiner Systems, deployed **on premises, off premises, or in a hybrid manner**, can all use dataminer.services through the dataminer.services connection. At the same time, the Skyline DevOps team can design and deliver solutions through a **sophisticated and highly automated CI/CD pipeline**. And finally, strategic partnerships and easy integration with platforms such as Microsoft Teams become easier than ever.

Enabled in just a few clicks, dataminer.services **empowers every single DataMiner user and DevOps engineer** to collaborate across the entire service supply chain, continuously and frictionlessly. Dataminer.services seamlessly expands your DataMiner Systems to deliver even more value, **better, faster, and cheaper** than ever before.

So, what exactly does "dataminer.services" refer to?

It is a **collection of functions** that are available when your DataMiner System is connected to the cloud, grouped in **three categories**, based on a **shared value**:

– The **DevOps** category focuses on empowering users to create and run solutions.

– The **Platform Services** category prioritizes convenience. This includes a number of tangible benefits for Support Services.

– The **Collaboration** category emphasizes synergy.
