

# The Data Productivity Cloud

Matillion Data Productivity Cloud is the productivity platform for data teams. It makes data work more productive by empowering coders and non-coders alike to move, transform, and orchestrate data pipelines, faster. Easily scale users and projects; with clear pricing that only charges you for what you use.

## Powered by PipelineOS

At the core of our platform, PipelineOS leverages stateless microservice agents to execute pipelines for data movement and transformation at **unlimited scale across infinite users and projects**; letting you harness the full push-down architecture of your cloud data platform, **without losing control of costs**.

### Move

**Move data easily to and from any source or cloud data platform.**

Use our library of hundreds of connectors (or easily build your own) and load data faster to meet growing business demands.

### Transform

**Build pipelines and perform ELT without the need to code.**

Harness all your data and perform complex transformations quickly and easily for use in analytics, using our visual, low-code designer.

### Orchestrate

**Automate, scale and simplify orchestration of data pipelines.**

Automate, schedule, and see all of your data pipelines – from no-code to SQL, python and dbt – all through a single pane of glass.

# Specifically designed to make all data work productive

Matillion simplifies and automates data movement, allows you to bridge the skills gap for data transformation, and handles the complexity of pipeline orchestration at scale.

## Everyone-ready

- Code-optional platform to suit a wide range of abilities.
- Handles both simple and complex data tasks.
- Intuitive interface that scales easily and make collaboration easier.

## Stack-ready

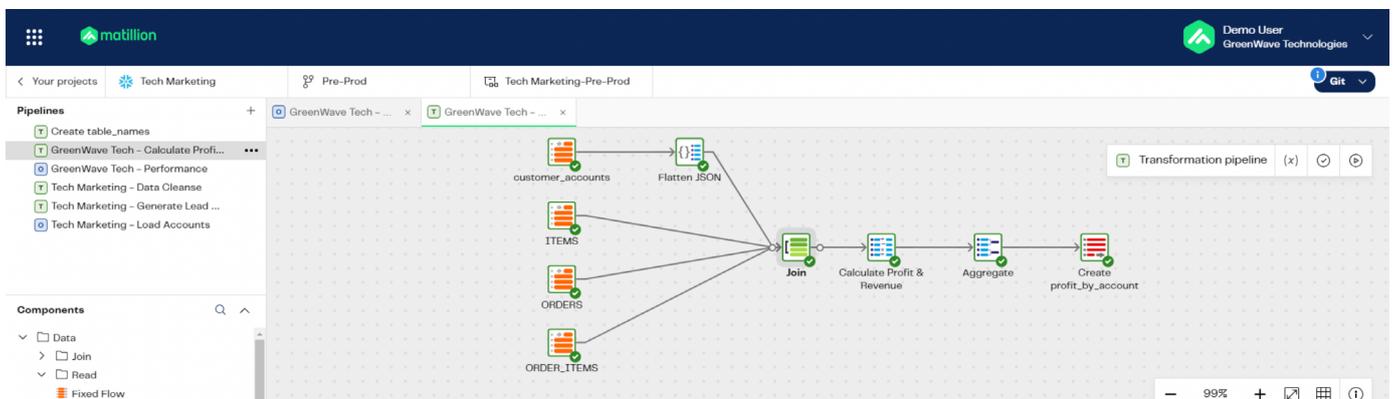

- Tightly integrates with the tech you already use.
- Streamlines data processes to save time and costs.
- Provides observability across all pipelines through a single pane.

## Future-ready

- Innovation and collaboration features supported by Git.
- Deploys flexibly with SaaS and hybrid options.
- Designed to work at scale with FinOps to support data growth.
