# Data Architecture and Governance

Our data and governance journey helps organizations derive value from their data assets, resulting in better decision-making and reduced costs.

## Why

Data is the most valuable asset of any organization in the digital age. It enables innovation, efficiency, and competitive advantage. But data as such is not enough. It needs to be reliable, consistent, secure, and accessible to all who need it. Data governance ensures that data meets these criteria and supports the organization's goals. Data architecture defines how data is structured, stored, processed, and delivered across the organization's systems and applications.

**Technologies**
- Microsoft Purview
- Cloud Adoption Framework
- AvePoint
- Microsoft Information Protection
- Azure Policy
- Azure Monitor

## What

Our data and governance journey involves establishing and implementing a set of principles, policies, standards, and practices that ensure the quality, security, accessibility, and usability of data in your organization. The impact of all of this? Enhanced decision-making, reduced costs linked to poor data quality, improved customer satisfaction, increased regulatory compliance, and a higher employee productivity as non-value-added tasks can be eliminated.

### BUSINESS CHALLENGES
Complicated data management
Data stored in silos
Inconsistent data terminology or master data
Lack of data privacy and security
Hard to cope with compliance requirements

### VALUE DELIVERED
Enhanced decision making
Cost reduction
Improved customer satisfaction
Regulatory compliance
Increased productivity

### HOW WE DO IT
Data Discovery workshop
Data Platform – Architecture assessment
Data classification
Data model analysis
Data quality & security assessments
Data governance framework
Power BI Governance

## How

**Discover:** Find & understand your data

Define: Record data processes & define key metrics

**Apply:** Implement data governance policies across systems and applications

Monitor & improve your data journey

## Outcome

Your organization will create value from your data assets by enabling better decision making based on accurate information, reducing costs, enhancing customer satisfaction, and increasing regulatory compliance and employee productivity.
