Software Asset  
Management (SAM)

# Software Asset Management

## Index

The Software Licensing Service.

01.

## What it is

---

### **Optimize and better manage your organization's IT resources**

Through the implementation of a SAM solution you can manage, control and protect the software resources of your company, thereby improving the company budget for an increase in the overall performance of resources.

02.

# Access permission

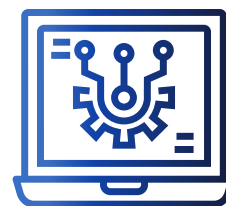

## Complete control over access rights

Our SAM service has a built-in software access permission control system.

There are 3 access levels available:

User

ICT

Business management  
(With delegation power)

03.

# User Management

---

## Automated user data management system

The software allows you to autonomously populate the system registry through a simple and intuitive graphic interface. It will also be possible to access "your" active licenses / assets area and revalidate / confirm or not the use of a license / asset or manually manage the registry, adding, modifying or deleting the various users.

IMPORT PERSONAL DATA

USER DATA MANAGEMENT

USER RE-VALIDATION MANAGEMENT

04.

## Price list management

---

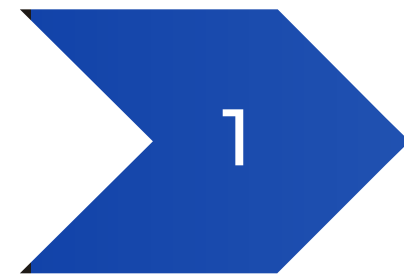

### Price list and discount management system

The program provides for the management of an unlimited number of price lists and prices associated with the products being purchased and / or maintained, which can be managed both manually and via upload. It is possible to manage the discounts and insert additional modules and related attachments.

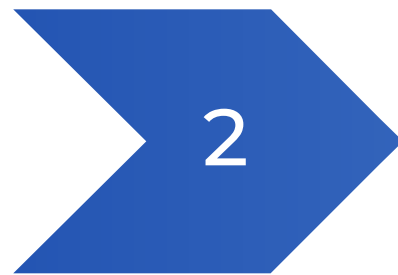

05.

## Management of the insertion flow and approving a request

---

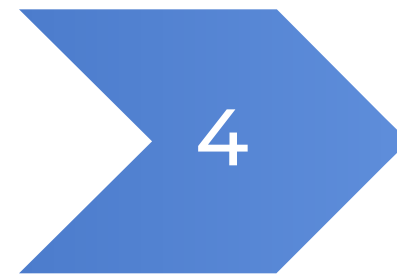

Insertion  
system of the  
request by  
users.

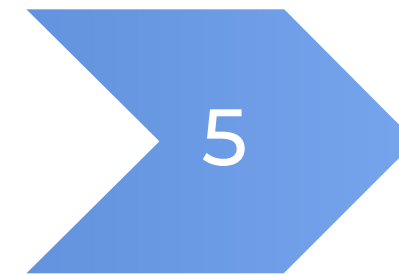

Validation  
by ICT.

Validation by the  
business and  
inclusion of business  
benefits.

Validation  
by ICT.

RDA card  
generation  
for the  
purchase.

Purchase.

06.

# Inventory and SW License Management

Functionality for massive import via xls of price lists and licenses.

Versioning associated with the single license / asset for tracking the changes made.

User license / asset assignment: possibility to uniquely assign a license / asset to a user or to associate a license / asset to a number n. of users (floating licenses).

Transformation of a request into an active license / asset on the system.

Management of modules associated with a license / asset.

Management of the license / asset life cycle (active, unassigned, no longer used by the user, to be disposed of, discontinued) be it a license / asset purchased or a mantaining / rental.

Automatic association of price lists to both CAPEX and OPEX product / asset licenses.

Possibility to insert one or more attachments to the single license / asset.

Massive management of renewals.

Possibility of managing extra price lists for any costs for particular licenses / assets.

Ability to duplicate licenses / assets.

Possibility to parametrically define the license request / modification periods. Detailed reporting.

07.

# License monitoring

With this module you will be able to have a complete monitoring of both floating \* and nominal licenses

Licenses installed on PCs but not tracked on Zephyr (for single user)

Licenses tracked on Zephyr but not installed on PCs (for single user)

Unused licenses (or with use below a parametric percentage threshold)

Usage time for each license divided by single user or department to which it belongs and by single license

Da verificare in base ai software utilizzati: Singolo modulo utilizzato per ciascun tool\*\*

## FUNCTIONALITY

Monitoring of floating and nominal licenses

\*\* Monitoring of floating licenses is based on integration with third-party tools whose cost is not included in the zephyr licensing

\*\* Technical feasibility will be assessed upon request for each tool

08.

## Economics Dashboard

---

Monitor every movement and keep your budget under control through our reporting service.

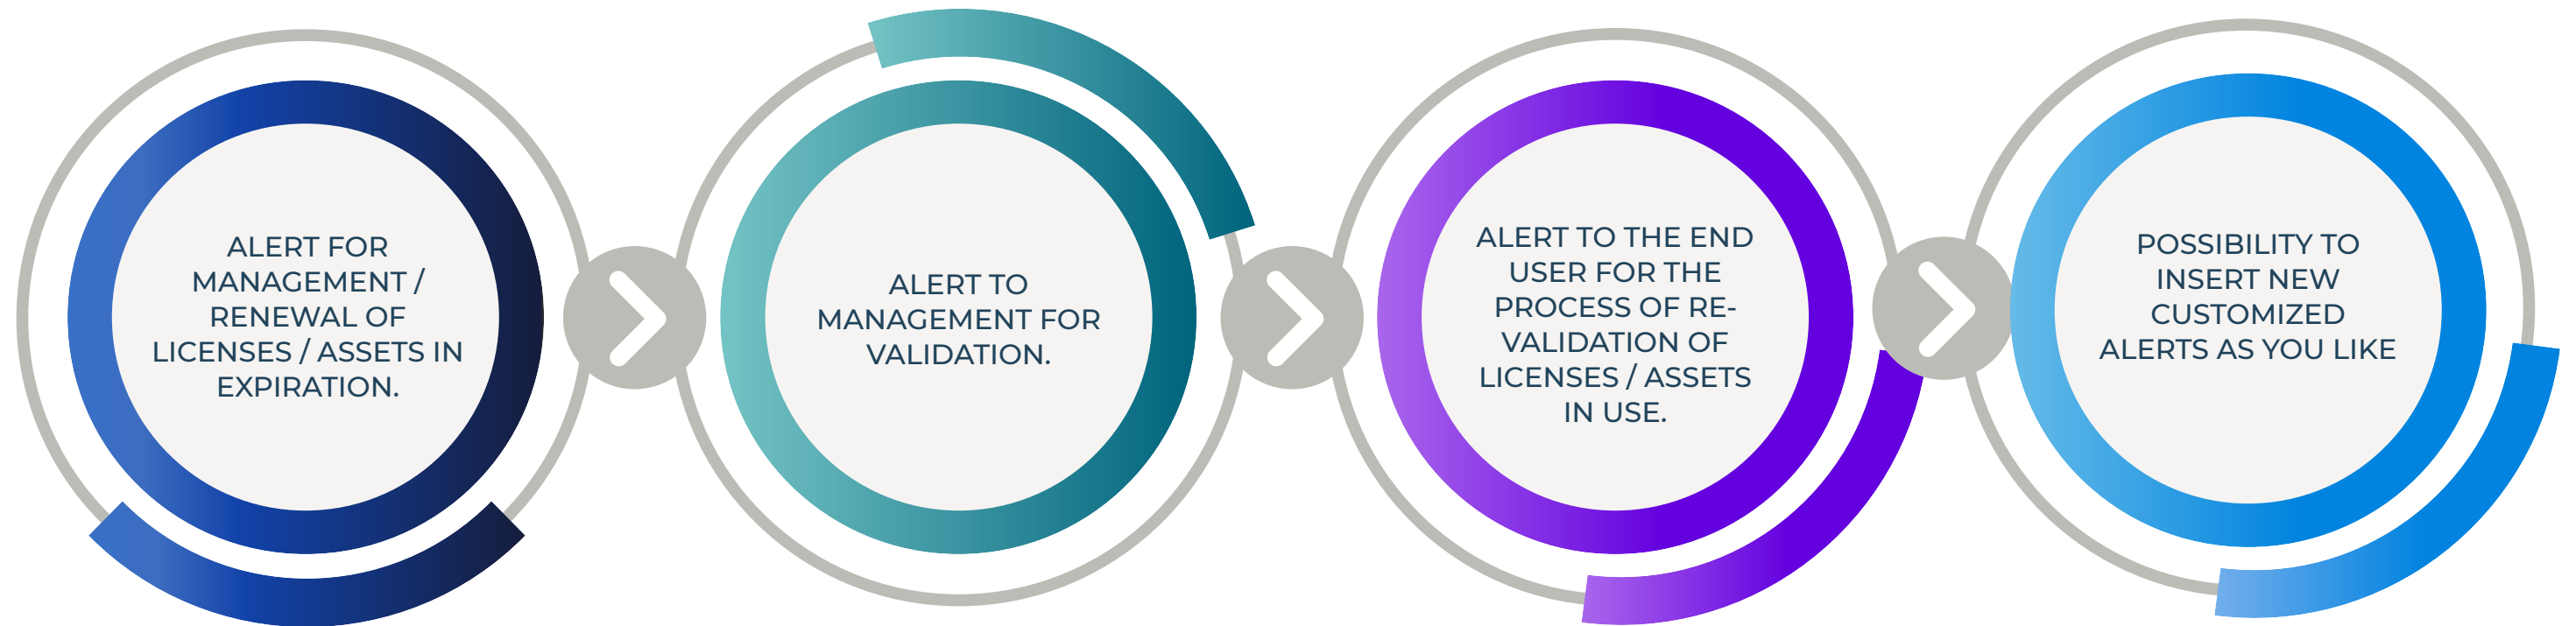

- Detailed reporting on the budget for each forecast / year broken down by vendor, usage segments rather than by type of license / asset or geographic area.
- Detailed reporting on the costs of the previous year / s broken down by vendor, segments of use rather than by type of license / asset or geographical area.
- Detailed forecast and historical reporting on efficiency of use inherent to the mng capacity and to the license monitoring features.

09.

## Integrated alerts
