# AI business case discovery workshop

Explore the possibilities of generative AI and discover how Microsoft's various Copilots and Azure AI Services can drive your business forward.

Why

Think about all the effort you spend in generating - often repetitive - information: data and documents. What if you could talk to your data sources, ask questions, receive answers. And have the ability to generate extra information quickly: e-mails, presentations, offers,... Discover the possibilities and how you could efficiently implement this in your own business environment.

What

Generative AI has gained significant attention and utility due to its ability to generate human-like text to interact with different data sources. Apply these new and promising technologies to your business. Explore the possibilities of Bing Chat Enterprise, Microsoft CoPilot, Microsoft Azure AI Services or AI for large data sets and derive useful business cases that help you to accelerate your business outcomes.

We start with an inspiration session, showing what Microsoft's various Copilots and Azure AI Services are capable of. We organize an ideation session to discover the most valuable business cases in your environment. We then rank the solutions by value and complexity and present a roadmap for the most eligible project.

Technologies
- Microsoft CoPilot
- Bing Chat Enterprise
- Azure AI Services
- Azure Fabric
- PowerPlatform

BUSINESS CHALLENGES
Accelerate business
Get the maximum out of corporate data.
Improve processes
Discover new opportunities

VALUE DELIVERED
More customers, shorter implementation times
