Root cause analysis with observability data

Combining advanced observability data, device hierarchies, and CMDB insights with robust time series analysis, our AIOps solution expertly pinpoints the root causes of operational issues – recommending actionable solutions that empowering your team to resolve problems swiftly.

Decades of ITOps experience at your disposal

Leveraging two decades of IT operations expertise, we've developed extensive runbooks for common issues, particularly with major systems like Oracle DB and SQL DB. These prebuilt runbooks are integrated into our AIOps solution, enabling automated, efficient problem resolution that taps into years of accumulated knowledge.

Seamless ITSM integration for enhanced resolution

Our AIOps solution integrates fluidly with IT Service Management (ITSM) systems to analyze historical data and draw insights from past issues. This integration not only speeds up problem resolution but also increases the accuracy of the solutions provided, enhancing IT service delivery.

Knowledge base enrichment for future problem-solving

In instances where manual intervention is necessary, our AIOps system captures and logs key actions, enriching a centralized knowledge base. This repository becomes a vital resource for future problem-solving, reducing dependence on individual expertise and minimizing risks associated with single points of failure.
