## CHALLENGES & NEEDS FACED

**What challenges or needs did you face that led you to a solution like ours?**

The difficulty our staff faced in their efforts to adequately monitor students' online behavior led us to search for a tool that would allow teachers to not only monitor online activity in real time but to redirect off-task student activity immediately and discreetly across our mixed environment of Windows and other student devices.

## WHY SENSO?

**Why did you choose our company over the competition?**

The Senso team offers excellent customer service, timely professional development, and listens to their users regarding product enhancement ideas. Response time to inquiries is very minimal. The variety of features this product offers is wonderful and it seems as though we are working with a company just around the corner not across the ocean. The competitive pricing is also a key factor.

## IMPRESSIVE RESULTS

**What results have you seen since implementing Senso.cloud?**

There has been more on-task behavior. Teachers are able to monitor student activity even when the student is in another setting and send a message of encouragement or instruction and guidance. Administrators are able to see what students are doing online and engage in conversations during passing periods and office visits. Teachers love the fact that they can monitor their students' activities even if they are away at a conference or home sick.

## THE BENEFITS OF SENSO.CLOUD

Cloud-based

Modular

Simple Setup

Azure Active Directory

Secure

Affordable

## SAVING YOU TIME & MONEY

What processes does this solution enhance, and how much does it reduce the cost and time to complete these particular processes?

The main activity this product enhances for our teachers is the act of "actively monitoring." While our teachers still move about the room and engage the students in conversations and look over their shoulders at their device screens for assistance, using Senso, our teachers can view all student devices from one monitor and notice if someone is struggling or off task, or being very successful. Teachers can send messages to students and/or lock student devices to refocus during a lesson.

Teacher and Tech Teams can access Windows devices and offer remote support. They can push websites to student devices saving time in searching for the correct URL-great for the younger learner. Teachers in a computer lab setting can use Senso to power up & down Windows devices with just a few clicks rather than touching each device in the room. With Senso, teachers have more time to make those important one on one connections with their students.

## WOULD YOU RECOMMEND SENSO?

What would you tell others who might be considering our product? Would you recommend this company's solution to your peers?

I have wholeheartedly recommended this solution to other schools and districts. When I talk about this product, I rave about the features of the product, the quality of the professional development, and the timely response from the staff.

Since implementing Senso.Cloud, Huntington ISD has experienced a variety of benefits, such as more student time on task, fewer incidents of broken devices because periods of idleness are noticed more quickly, and more administrator connections with students and their work.
