App Modernization
4 Week Assessment

AVASOFT
SHAPING NEXT GEN

Transform your legacy application into sustainable & modular architecture and make them more agile!

Enterprises across diverse business verticals are finding it really difficult to manage their legacy applications. Lack of flexibility, scalability, inefficiency to integrate with modern tech systems, and high maintenance & operational cost makes the monolithic applications even more challenging. With application modernization, you can scale your business and make your applications more agile.

Want to scale and modernize your legacy application?

AVASOFT helps you make the most of your IT investments by assessing your existing application and recommending the best modernization approach for your business needs!

With years of hands-on expertise, AVASOFT provides you with a complete assessment report of the application infrastructure and an in-depth analysis of the features & functionalities gaps. We also support you with actionable insights and walk with you in your modernization journey.

AVASOFT
SHAPING NEXT GEN

Here's what we do:

Assess: We collaborate with your team to understand your business requirements and objectives. We assess the application's architecture for application performance, component dependencies, usage patterns, usability pain points, integration points, and code practices, in this phase.

Evaluate: We gather the data and evaluate it to Identify the functionality gaps. We predict the roadblocks and share insights on the potential opportunities.

Recommend: We develop a strategic plan for deployment by grouping the functionalities as micro apps and design a wireframe concept. We also suggest a suitable modernization project roadmap based on cloud-native principles and provide you with the best feasible solutions. Along with this, our team will give you the architecture recommendation and cost estimations for the project.

By the end of this Assessment, you will receive insights that will certainly help you begin your migration journey

- Detailed analysis report of your existing legacy architecture

- Scope for eliminating redundant software/Hardware

- Proposed architecture recommendations for moving to cloud and selection of tech stack based on the business need

- High-level wireframe concept and custom integration options as per the requirement

- Timeline and Cost for migration to proposed architecture and future builds

- End-to-end support for migration and cloud adoption

Assess your application and begin your migration journey with us.

Make your application more scalable, increase the ROI and drive higher performance with modern applications.
