PLATFORM FOR IT INFRASTRUCTURE AND WORKPLACE AUTOMATION

XOAP

XTRA ORDINARY AUTOMATION PLATFORM

Top 5 reasons to use XOAP:

- Reduce external consulting costs;

- Manage all systems anywhere;

- Eliminate IT sunk costs;

- On-demand cloud enablement;

- More affordable than any other option.

Find out more

XOAP™ empowers organizations – regardless of budget or size – to deploy, manage and automate their entire IT infrastructure: virtual desktops, notebooks, or complete server environments from anywhere, anytime.

With XOAP, you're able to use all existing platforms at the same time; whether you prefer the public cloud or your own data center. Design your IT according to your requirements and budget without the need to install or update expensive management infrastructure.

Providing an enterprise automation platform which empowers the simple and scalable way of IT management.

Fully reproducible IT infrastructures on different platforms such as AWS, Azure or VMWare.

Enterprise monitoring without providing any backend. Take advantage of already available dashboards.

Intuitive and agentless IT automation for consistent system configuration across all devices – everywhere.

Deploy applications to an unlimited number of systems inside and outside the enterprise network.

Integrate third party solutions such as uberAgent, Ivanti, deviceTRUST or other products.

Standardize and extend OS images as needed with scripts, applications and configurations – anywhere.

customer-success@xoap.io | xoap.io

Spread your wings and transform right now.

XOAP's open architecture reacts to the most diverse demands of scripting and coding in multiple cloud or hybrid environments – intuitively drilled down to one simple console for a seamless administration of most complex demands. Combine the modules according to your needs:

IMAGE.XO

Customized image builds for multiple platforms. Deploy images on multi cloud platforms such as AWS, Azure or GCP, and on premises on VMWare.

PLATFORM.XO

Entire platform, infrastructure and workplace automation. Provision and manage infrastructure, servers and workplaces on premises and on multi cloud.

APPLICATION.XO

Efficient and automated software deployment. The easiest way to package software. Install it on any system worldwide, whether it's managed or unmanaged.

CONFIG.XO

Cross-platform Desired State Configuration (DSC) management. Create configuration as code in hybrid infrastructures via a simple UI.

PROFILE.XO

Allow complete control and configuration of user settings on different Windows Workplaces. Easy migration of user settings and profiles.

INSIGHTS.XO

Powerful analysis, detailed reports and easy-to-implement auditing functions – all without having to install and host the infrastructure yourself.

EXTENSIONS.XO

Modular system for integration of additional solutions, such as Ivanti, uberAgent, deviceTRUST and many more.

CONNECT.XO

Manage your environments from the data center and connect cloud platforms, as well as hypervisors.

XOAP™ powered by RIS AG

XOAP™ is a SaaS application, that empowers any organization to deliver and manage their infrastructures and virtual desktops via a single console for seamless control and management.

By implementing code-based solutions in hybrid and multi-cloud environments we learned that the enormous complexity of the various tools and handling is a huge challenge.

Therefore, our application offers easy management of all modules in hybrid environments including all necessary components to increase the transformational speed of the responsible teams when dealing with infrastructure as code technologies.

Due to the modular design, all components can be used or licensed individually. However, the combination of different modules shows the holistic strength of the solution.

- Free trial (30 days)

- Pricing per module starting at 99$/month

- Standard, Enterprise and Education plans available

Request a 30-min live demo.
