

Security Assurance for Microsoft Azure

Let our intelligent software identify the Azure security vulnerabilities you don't know you have

Security Assurance for Microsoft Azure

67% of cybersecurity professionals have identified that misconfiguration is the biggest threat to organisations using public cloud.

Are you certain that your Azure environment is secure? With the growing complexity of Microsoft Azure, it's all too easy for misconfiguration to leave you open to threats.

Drawing on decades of specialist Microsoft Azure knowledge and expertise and utilising our own bespoke tooling, we can provide a digital security vulnerability assessment of your Microsoft Azure environment in minutes.

95% of cloud security failures will be the fault of the customer in 2021

Key Benefits

- ▮ **Rapidly identify vulnerabilities**
- ▮ **Clear priority reporting**
- ▮ **Identify technical and operational weak points**
- ▮ **Identify security state drift after every change**
- ▮ **Access to remediation services**
- ▮ **Access to continuous security assurance**

Assessment Checks

- ▮ **Identity & Access Management**
- ▮ **Azure Security Centre Configuration**
- ▮ **Data Collection & Storage Accounts**
- ▮ **Security Policies & Parameter Settings**
- ▮ **Virtual Machines & Network Configuration**
- ▮ **Logging & Security Monitoring**

Digitally transform with confidence

Whether you have an internal team or a third party supplier managing your Azure environment, give yourself the peace of mind that even the most obscure vulnerabilities will be automatically identified every 24 hours.

Digitally interrogating your Azure environment, we check it against security configuration best-practice and the latest security standards. This gives you a clear view of potential threats and helps prioritise what's most important to resolve.

Peace of mind in an ever evolving digital landscape

67% of cybersecurity professionals have identified misconfiguration of the cloud platform is the biggest threat to organisations using public cloud

Source: ISC2 2021 Cloud Security Report

What are the biggest security threats facing organisations using public cloud in 2021?

1

Deployment or configuration errors

2

Exfiltration of sensitive data

3

Unauthorised Access

4

Insecure interfaces/APIs

If you're one of the 95% of organisations whose cloud security failures would be your fault, why not give us a call to discuss how our Azure security assessment can help you.

A full assessment and detailed report highlighting the threats and remediation requirements can be deployed in minutes and costs from as little as £750.

A paid for assessment comes with a detailed PDF report of the vulnerabilities identified as well as the required steps for mitigation. This is combined with a virtual presentation by one of our cloud security consultants to talk you through the findings in detail.

We can also recommend or remediate as part of the engagement as well as provide a managed service which monitors your Azure environment every 24 hours.
