Remote Monitoring and Management

Asset Cloud

Bringing a full 360° view of how your hardware and software is being used across your estate. Enabling better decisions on upgrades and renewals with key metrics that will allow budgets to be focused in the areas most required.

ASSET UTILISATION TOOLS

Asset Cloud gives you a clearer insight into your devices, their hardware, software, and overall performance, helping you to make efficient decisions on replacements and upgrades.

✓ Add and Edit Assets.

Add machines, devices and servers across your entire IT estate. Add and edit model information, specifications, its location and more.

✓ Device Reports.

Giving you a concise picture of your devices' specifications and software across your estate, wherever they are.

✓ Pin-point Security Issues.

Enjoy peace of mind knowing your devices are up-to-date and covered, enabling quick identification of devices that need your attention.

✓ Enable Alerts.

Enabling alerts lets you know when a device goes above its CPU usage or disk space allocation, helping to minimise downtime.
