The Business

Sendmarc's purpose is to make the Internet a safer place, and we've started with email.

Imagine if email spoofing and impersonation was impossible. What if no attacker could falsely send an email from your organisation's domain? The effect on fraud, identity theft and all sorts of breaches would be immense. The internet would be a safer place.

Sendmarc enables organisations to protect their staff, customers, suppliers and the whole world from email impersonation and phishing attacks. We do this using our SaaS platform, a set of well-defined implementation and testing processes, and a full DMARC compliance service.

Using Sendmarc, a customer's domains will experience from the following enhancements:

- **Security:** Ensuring no attackers can send email impersonation / spoofing attacks on their domain.
- **Compliance:** Ensuring staff can only send their mail via group approved email servers enforcing correct records management of all email communication.
- **Visibility:** Gaining full visibility of all servers, both legitimate and illegitimate, that are sending email from their domain.
- **Delivery:** Improving their email delivery, making sure it arrives in the inbox and not the spam bucket.

Sendmarc calls on all domain owners to know their Domain Safety Score and to take the steps to protect themselves and others from cybercrime. We thank you for your interest and encourage you to be a responsible Internet Citizen.
