HTG

Comprehensive cloud migration strategy.

HTG's Data and Infrastructure Migration Assessment Service is the strategic plan for all parts of your cloud migration to Azure, tailored to your exact requirements.

You have a vision of where you want to be, but now you have to sweat the small stuff. This extensive report provides everything you need to know about moving your data and infrastructure to the cloud, either as a full lift and shift, or as part of your ongoing cloud transformation and optimisation processes. HTG's assessment offers qualifying companies a chance to do this the right way, first time.

Building out the strategy

If you're just starting out, first of all, we highly recommend you consider our one week Azure Foundations assessment. This provides a quick overview, tailored to your organisation.

However, if you have already moved part of your legacy infrastructure to the cloud, or if you have a good overview of the migration process in principle, then this assessment is the perfect next step.

The advanced assessment provides a full breakdown including pricing options, areas of concern and next steps. It take 4-8 weeks to complete, fully backed and paid for by Microsoft.

What clients say

"HTG had proved their capabilities with a number of consultancy engagements so we knew we could trust them. We've received so many glowing reports about their support, the knowledge of the support staff and their ability to respond in a timely, professional and knowledgeable fashion."

Brad Rowland
Microsoft

In-depth audit

We deploy an agentless scanning tool to understand your existing infrastructure. This covers VMs and databases (and desktops if Azure Virtual Desktop scenarios are involved), also Windows or Linux servers, SQL / OSS databases and standalone applications.

Data analysis

We gather performance and utilisation data, such as CPU, network, RAM, disk, and storage. Our team shares its analysis on a central console so you get real-time recommendations. And, you gain insight into blockers preventing your cloud transformation.

A strategic report

Gain an awareness over your computing environment, rather than fragmented insights that don't tell the whole picture. We identify your cloud migration readiness, timelines, cost-benefit analyses options by year, security features, risks and opportunities.

Why HTG's Data and Infrastructure Migration Assessment Service?

HTG - Huge value. No charge.

This assessment is particularly comprehensive, meaning you get a lot out of it. The level of insight you stand to gain (if you qualify) is something most organisations don't get without engaging with a provider for several months and thousands of pounds. With us, you get all that for free because Microsoft is footing the bill for qualifying companies and HTG are contributing their expertise and pre-sales resources. You can't beat that price.

See all your options

The Data and Infrastructure Migration assessment includes a complete business case and Total Cost of Ownership (TCO) for all of 1-5 years. And, you can see what different migration options mean for your business from a cost perspective, but also in terms of day-to-day disruption, training and upskilling. On the other side of the coin, you get all the benefits of each option, including virtual desktop opportunities, laid out in front of you. This makes it so much easier to communicate the proposition to stakeholders so your business can make an informed decision.

Verified Azure expertise

Our team are third-party verified by multiple cloud platform providers, but our accreditation with Microsoft's Advanced Azure Specialism is a testament to the depth of our expertise. This is where we've put our time, energy and attention. For our customers, that means they get a partner that can help you make the move, no matter how complex.

Virtual desktop expertise

Wait, we were talking about cloud migration, right? Well, the advantage HTG offers is that we're an Advanced Specialist in Azure Virtual Desktop, too. So, if you're wondering, 'Where do we go from here?' then we have the ideal next step in your journey. If you choose to employ HTG's services for your migration, we can build the groundwork for deploying VDs at the same time. This is the ultimate combination of technologies for a truly modern workplace.

Key use cases

Hybrid and remote work

In all likelihood, the majority of businesses will adopt (or have already adopted) a hybrid working approach. That means some amount of distributed teams, remote working and flexible device-use are par for the course. This makes a digital workplace in the cloud - that can be accessed from anywhere - essential.

Virtual desktops

We're specialists in virtual desktops, including Azure Virtual Desktop. This is our wheelhouse. With AVD, you get a secure, portal-style experience into your work systems, files, tools and apps. This gives you an enhanced digital working experience, but to get there, it all starts with the cloud.

Auto-scaling in the cloud

This assessment provides the full detailed strategic plan you need to lift and shift your existing infrastructure into the cloud. From there, you can transform your entire environment, optimising, automating and taking advantage of more cloud capabilities. In so doing, you unlock new opportunities to grow and outpace competitors.
