TechSpark Fellows Impact Reports ..................................................................................................... 8-50
How we work

Our world is facing increasingly complex challenges. Challenges that no one company, industry, country, or region alone can solve. That’s why Microsoft works across sectors and borders—to foster collective action, amplify impact, and drive progress faster and further.

Engage local communities

We understand that change happens locally. That’s why we work closely with communities to understand their specific needs, challenges, and strengths—so that we can best support them in their progress.

September 2023 – May 2024

Microsoft TechSpark Fellows helped catalyze more than $167 million in funding from other organizations and upskilled more than 9,000 job seekers and employees across 42 U.S communities.
TechSpark Fellows Coach

The Microsoft TechSpark team guided Fellows as they
• Learned about Microsoft and Microsoft partner resources
• Explored community opportunities
• Implemented new pilot programs
• Sustained what worked by building local ecosystems

We partner across sectors to understand the unique challenges and to explore solutions, programs, and partnerships that will be most effective in local communities.

Microsoft TechSpark Fellows: Impact Reports

Discover the stories of impact, innovation, and empowerment within each Impact Report. Experience the vital role nonprofits play in understanding local opportunities, engaging communities, and activating ecosystems to drive meaningful change. These reports are not just documents; they showcase the transformative work unfolding across the US, bridging gaps where opportunity is often overlooked.

Explore the pages of each Impact Report and be inspired by the incredible efforts to expand opportunities and unlock the full potential of every community.
TechSpark Fellows

The Microsoft TechSpark program is designed to accelerate local economic opportunity across communities in the United States. Whether it is promoting digital skills and employability or accelerating job creation, TechSpark provides opportunities in places where talent often gets overlooked.

Alongside our partners, Microsoft TechSpark is focused on providing this community-first, community-driven approach nationally. View each state’s progress to expand opportunity.

Local opportunity
Exposing students to Science, Technology, Reading, Engineering, Arts, and Mathematics (STREAM) skills and careers is vital for preparing them to thrive in a technology-driven world, fostering innovation, and addressing future workforce demands.

Engaging the community
STREAM Innovations is pioneering a groundbreaking initiative: A mobile Health Lab designed to introduce students from under-resourced communities to health and tech. With the support of a grant from Catalyze Birmingham, they aim to repurpose a cargo shipping container into this innovative Health Lab, fostering STEM experiential learning and accelerating early access to STEM opportunities in Alabama.

The collaboration with Microsoft TechSpark accelerates STREAM Nexus targeting 6th to 11th grade students and seamlessly integrates STREAM and Artificial Intelligence (AI). Classes will be hands-on, leveraging cutting-edge tools with 3D printing and Virtual Reality (VR).

The primary objective is to explore the dynamic nexus between education and innovation, equipping students with vital skills and knowledge for future success in the increasingly interconnected digital world.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- City of Birmingham
- Microsoft

Impact to date
Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.

- 1 Mobile Health Lab
- $350K Additional Funding from other organizations

In the news
Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth

- March 2024: Catalyze Birmingham Challenge Awards $720K to Five Innovative Nonprofits

“I’m excited about the possibilities that will come from this collaboration and the impact it will have on the communities we serve.”
Adrienne Starks, PhD
Microsoft TechSpark Fellows Alabama
Local opportunity
With nonprofits potentially missing out on efficiency gains due to a lack of technology integration, it’s vital to equip staff and volunteers with digital skills. Amid statewide workforce shortages, there’s a unique chance to leverage AI and related technologies. By doing so, we can empower nonprofits to overcome staffing challenges and significantly enhance fundraising and communications efforts.

Engaging the community
Covenant House Alaska worked with the community to create a project that leverages AI and related technologies to address the challenges faced by nonprofits amidst a statewide workforce shortage. Through this project, they aim to certify relevant staff leveraging Microsoft Digital Skills Center and LinkedIn Learning pathways, empowering them to increase fundraising capacity and expand outreach to potential supporters and funders.

By partnering with The Foraker Group and Microsoft TechSpark they’ll organize trainings introducing AI to Alaska nonprofits and host breakout education sessions at their annual conference. Increasing the programs reach to help strengthen the nonprofit community.

With the support of local nonprofit partners like United Way and The Foraker Group, they’ll bolster the community’s ability to sustain vital programs.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

• Defined AI Digital Skilling Project

In the news
Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth

• July 2023: Microsoft TechSpark and Covenant House ignite economic innovation and opportunity

“As a nonprofit faced with the growing challenge of raising more funds to support life changing programs for vulnerable young people, it is a timely opportunity to have access to capacity building technology products and grant funding that allows us to jump into an AI innovation project with eyes wide open and lots of hope for the future.”

Joseph Hemphill
Microsoft TechSpark Fellow
Alaska
Local opportunity
Arkansas, like many other states, has experienced labor shortages in various industries. This labor shortage hinders economic growth and may lead to social issues. Addressing the labor shortages through targeted programs can benefit individuals, businesses, and the community.

Engaging the community
Arkansas Regional Innovation Hub started Skills to Launch in 2020. This program is a 10-week scholarship-based hands-on program, designed to provide technical skills and soft skills training to adults in a variety of trades including industrial operations, production welding, HVAC, Information Technology, and Solar Panel Installation. The goal is to create an opportunity for individuals looking for a career in a trade industry, but do not have the funding to complete the necessary training. The partnership with Microsoft TechSpark enabled IT students to join the program at no cost.

The partnership with Microsoft TechSpark has increased our ecosystem building efforts and allowed us to leverage Microsoft’s brand with employers, funders, and training partners.

The Skills to Launch program offers IT students:
- Microsoft certifications
- CompTIA certifications
- Employment opportunities in local businesses

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
- Arkansas Department of Commerce
- Community Impact Arkansas Center for Data Sciences
- University of Arkansas at Pulaski Tech
- PPG Foundation
- Microsoft
- 50+ Companies

Impact to date
Metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.
- 150 Skilled (22.5% female)
- 85% Job Placement with 76% trade specified
- $25,000 Additional Funding

In the news
Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth

“We are happy to be an employer partner and we value the positive impact this project has on the Arkansas workforce, infrastructure-related sectors, and the lives of the individuals that participate.”
Zachary Janosky, Global Manufacturing, Inc

“I am stunned at the amount of information I am learning about Microsoft and the very supportive community within the TechSpark Fellows!”
Errin Stanger, Microsoft TechSpark Fellow, Arkansas
Local opportunity

The demand for digital skills is rapidly expanding across all industries, and historically underserved students may not have access to digital skills education. By providing these students with the necessary skills we can increase the talent pool. Ensuring organizations have access to a diverse and skilled workforce capable of meeting the demands of a digital economy.

Engaging the community

_Coding in Color_ equips historically underserved students with the digital skills to be successful in the 21st century through computer science education. This program includes workshops, hackathons, and summer camps:

- Web Development Certification program, in collaboration with Hope Academy, is possible because of the collaboration with Microsoft. This partnership helped launch this program, enabling data gathering and serves as a proof of concept for securing future grants.

Hackathon, in collaboration with Phoenix College, marked a significant milestone.

During this event, students dedicated their skills to crafting an iOS application for a local business, Taylor Candle & Co. The overarching goal was to contribute to the regional economy by catalyzing Digital Transformation in small businesses and fostering the growth of tech talent. Throughout the hackathon, our students not only acquired new skills but also had the opportunity to establish professional profiles on LinkedIn, complemented by headshots from the talented local photographer, Francis Andrea.

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- Salt River Schools, Phoenix College, University of Advancing Technology, Hope Academy High School, NourishPhx, Banner Health, and Microsoft

Impact to date

Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.

- 115 Students
- 80% of students are from historically disadvantaged backgrounds
- $5,000 additional funding

In the news

Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth.

- August 2023: ‘Coding in Color’ brings the world of computer science to underrepresented teens
- December 2023: Local Non-Profit Creating Opportunities for Students to Build Apps and Websites for Local Businesses
- February 2024: Coding in Color Selected as Recipient of Banner Health Community Reinvestment Grant in Arizona

“We firmly believe that Coding in color offers invaluable opportunities to students, contributing significantly to the creation of a more inclusive and equitable future.”

Adrian De Alba, Maricopa County Regional School District

“We’re thrilled to have been selected as a Microsoft TechSpark Fellow. We’re looking forward to expanding our community relationships and increasing access to our programs across the state”

Diana Lee Guzman
Microsoft TechSpark Fellow Arizona
Local opportunity
The Colorado-Wyoming region, two states that have grappled with two decades of environmental challenges such as extreme weather events, has underleveraged potential to address the Western United States’ most pressing issue: Climate change and accelerated aridification. Together with our partners, we believe that Colorado and Wyoming can be at the forefront of the nation’s environmental and climate technology initiatives because our region is well-positioned to develop innovative solutions for environmental monitoring, measurement, verification, and prediction.

Engaging the community
Innosphere Ventures formed the “Colorado-Wyoming Climate Resilience Engine” (CO-WY Engine) to reshape the landscape of reliable climate technologies and economic development in Colorado and Wyoming. The CO-WY Engine will drive the development and commercialization of innovative solutions in areas such as wildfire mitigation, water resource management, soil carbon capture, earth sensing, methane, sustainable agriculture, and adaptation to extreme weather events. These technologies will revolutionize how we predict, mitigate, and adapt to climate impacts – and empower communities, governments, and industries to effectively navigate and adapt to climate challenges.

Example areas of collaboration with Microsoft TechSpark include the Microsoft Climate Research Initiative (MCRI), the Microsoft Planetary Computer team that supports sustainability decision-making with the power of the cloud, the Azure Space/geospatial work, beginning a technology assessment with Microsoft for our CO-WY Engine, and on the energy front with Microsoft for Energy & Resources.

Activating local ecosystems
Forming the backbone of the CO-WY Engine is a diverse partnership network that leverages our region’s assets in industry, academia, and government. Key partners include prominent research institutions, federal laboratories, economic development organizations, tribal communities, workforce centers, community colleges, policy groups, and corporate partners. Examples of Federal Lab partners include the National Oceanic and Atmospheric Administration (NOAA), examples of corporate partners include Lockheed, NVIDIA, Palantir Technologies, Mars, Shell, Chevron, and Trimble.

Impact to date
At a kick-off event sponsored by Microsoft in Washington D.C., the U.S. National Science Foundation (NSF) congratulated the Colorado-Wyoming Climate Resilience Engine (CO-WY Engine) on receiving $15 million over the next two years, and up to $160 million over the next ten years. In ten years, the CO-WY Engine expects to generate significant economic impact for the region, including 22,000 new climate technology related jobs, $1.5 billion in regional GDP impact, more than $1 billion in private capital formation, the training of more than 2,000 individuals, and the distribution of $80 million in commercialization grants to startups in the climate technology sector.

In the news
Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth.

- **February 2024:** Washington D.C Microsoft Event LinkedIn
- **January 2024:** Administration announces Innovation Engines Awards

“This initiative will not only leverage our region’s expertise to develop innovative solutions to climate challenges, but we will accomplish this while driving economic growth through integrated programs in use-inspired research, workforce development, translation of products, and strategic partnerships.”

Microsoft TechSpark Fellow Colorado
STEAM Train Inc.
Digital Skills in Middletown, Connecticut

Local opportunity
As the digital skills gap continues to grow, many individuals, particularly those from disadvantaged communities, are unable to access opportunities to acquire the necessary skills to thrive in the ever-changing job market. STEAM Train’s initiatives aim to address this challenge by providing digital skills training, thereby ensuring a skilled and diverse workforce for the future.

Engaging the community
STEAM Train Inc., addresses the community opportunity to establish the AI Institute of Connecticut, a skilling initiative that enhances their Fast Track Academy and equips graduates and others with cutting-edge digital skills for the workplace. This program leverages Microsoft Copilot, Microsoft Cloud for Nonprofit, Power Automate, LinkedIn Learning training and certifications, AI tools, and AI4All resources. They aim to bridge the technical skills gap for underrepresented individuals.

Microsoft TechSpark’s involvement and resources bolstered their ecosystem, lent credibility and drew attention the importance of STEAM Train’s work. They are now garnering interest from C-suite leaders, academics, and elected officials, who are invigorating support for their cause. Microsoft’s presentation at the STEAM Train’s fundraiser reinforced their standing in the region, offering clarity to leaders on the significance of their digital skills vision, Artificial Intelligence (AI), and providing invaluable resources to advance their mission.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- Connecticut Senate – 9th District
- Connecticut House of Representative – District 100
- Wesleyan University, CT State Community College, Cigna Corporation, Liberty Bank, Travelers Insurance Company, Campus Works, Workforce Alliance, Shiloh Christian Church, and Microsoft

Impact to date
Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.

- Modernized curriculum leveraging LinkedIn Learning
- 60 learners
- IT apprenticeships for graduates

In the news
Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth.

- July 2023: STEAM Train selected as part of Microsoft TechSpark

“STEAM Train, Inc’s important work in moving people to STEM careers is a never-ending process. The AI Institute initiative will ensure that their students and community partners keep up to date with the opportunities and challenges that artificial intelligence will bring.”

Prof. Peter J. Kootsookos,
CT State Community College Middlesex

“We are learning how to strengthen our ecosystem by collaborating with Microsoft TechSpark.”

Donna Hylton,
Microsoft TechSpark Fellow
Connecticut
Local opportunity
The community of Anacostia is rich with potential, but unfortunately has been systematically disinvested. Horton’s Kids seeks to change this by becoming a technology hub for the community. Starting with digitally skilling staff and extending to the children and families that we serve. We seek to create an ecosystem where Digital Transformation is the norm.

Engaging the community
Horton’s Kids is leveraging the connections of Microsoft TechSpark to enhance collaboration, efficiency, and address the professional development of their staff, aligning with strategic priorities outlined in the recent strategic plan. Additionally, they aim to expand their existing STEM education programs, including partnerships with Girls Who Code, and explore entrepreneurship opportunities for caregivers and adults in the community.

They have creatively leveraged Microsoft 365 and LinkedIn Learning resources to curate training programs tailored to the various needs of their team.

The Corporate Ideation Summit was a great success and attendees included prominent organizations from across the region. This fostered discussions on how to provide opportunities in digital literacy and upskilling for staff and community alike.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- Connecticut Senate – 9th District

- July 2023: STEAM Train selected as part of Microsoft TechSpark

“I’ve had the incredible opportunity to bridge the gap between technology and community empowerment. With the successful completion of our Teams integration, we’ve laid the groundwork for meaningful collaboration and learning. Launching the Girls Who Code initiative was a significant step towards inclusivity, ensuring young girls in our program see and believe in their potential to shape the future of tech.”

Nadine Wilson
Microsoft TechSpark Fellow
Washington D.C.
Local opportunity
There is limited access to technology education for underserved youth. Many youth from underserved communities are lacking the resources and opportunities to acquire essential technology skills needed in today’s digital world. Lack of access to digital skills can create barriers to future employment and economic advancement.

Engaging the community
Upendo United Foundation’s technology skills program provides youth with hands-on digital literacy and coding skills. This program leverages Microsoft 365, Microsoft Publisher, and Microsoft MakeCode in its training. Equipping youth with the digital skills needed to secure future in-demand jobs, increased wages, and improved quality of life.

In summer 2024, the technology skills program will host a 6-week program teaching youth how to code leveraging Microsoft MakeCode.

To expand their reach, they extended the program to Kenya. Collaborating with a university intern, they organized a 6-week Microsoft 365 training and provided teacher training using Microsoft MakeCode, empowering educators to teach local youth.

The partnership with Microsoft TechSpark and harnessing the strength of the Microsoft brand has enabled them to secure additional funding partners.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

Local opportunity

There is a vibrant diversity in Immokalee’s 30,000 residents, where English isn’t the primary language in most of the households, and where residents predominantly are from Mexican, Guatemalan, or Haitian backgrounds. Despite challenges, such as an average annual income of $29,000 for males and $19,000 for females, there’s immense potential in engaging deeply with the youth. By imparting crucial digital skills, we can equip them for success in today’s dynamic workforce.

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- Florida Gulf Coast University
- Immokalee Middle School

- November 2023: Microsoft kicks off TechSpark Immokalee Program with Career Panel for students | South Central Florida Life
- July 2023: Microsoft empowers area youth through TechSpark Immokalee

“This initiative has not only provided insights and enriched my understanding but has fundamentally altered the way I perceive education, engagement, and collaboration.”
Daniel Linares, Microsoft TechSpark Fellow Florida

“We are thrilled to see the progress our students have already made. TechSpark is a testament to the power of collaboration between businesses and community partners, and how together we can create life-changing results. Thanks to Microsoft, FGCU, and a matching grant from the Collier County Industrial Development Authority, we can equip our students with technological skills that will benefit them in their future careers.”
Noemi Y. Perez, President & CEO The Immokalee Foundation
Local opportunity

Hawaii has a high rate of homelessness due to one of the highest costs of living in the country. A severe housing shortage of at least 50,000 units, along with a history of displacement of its native peoples, also contribute to the issue of affordable housing. Homelessness, incarceration, and substance use are often a vicious cycle that impact our Native Hawaiians and Pacific Islanders disproportionately.

Engaging the community

Project Vision Hawaii, with the help of Microsoft TechSpark, launched a workforce development program at Maui’s shelter, Pu’uhonua O Nēnē for Lahaina fire survivors. Residents can receive a stipend for assisting the shelter while learning essential skills, including resume writing and financial literacy, alongside. They also offer certifications for various jobs, and LinkedIn Learning courses.

In February 2024, they launched a supportive housing village with a computer lab, aiding residents—many of whom are community college students or GED candidates.

The program’s introduction and on-site technology have led to job placements, educational enrollment, and skill development among residents.

Microsoft’s local and virtual teams contribute through volunteering and hosting sessions to enhance PVH’s use of Microsoft 365, AI training, and data visualization with Power BI. This partnership provides lasting benefits to the nonprofit.

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

“I know how other people live because I used to be on the streets myself. That’s what is great about our programs is that I’m able to help by putting myself in their situation,”

Cindy Tokita, Project Vision Peer Specialist

“I know this has been a crazy time for us but knowing we have Microsoft’s support has been incredibly encouraging.”

Darrah Kauhane
Microsoft TechSpark Fellow Hawaii
Local opportunity

The absence of a robust STEM and entrepreneurship talent pipeline results is missed opportunities for innovation, economic growth, and sustainable development, hindering a community’s ability to compete in a rapidly evolving digital economy.

Engaging the community

Pi515 introduced an inaugural AI Youth Challenge alongside their Day of Innovation, marking a significant stride in educational advancement. This initiative aims to familiarize high school and college student with cutting-edge technological skills and insights, convening 300 students for an immersive day featuring AI and AR workshops, an AI pitch competition, a Girls Entrepreneurship Incubator Pitch, and other enriching activities.

Leveraging sponsorships, including support from Microsoft’s STEM curriculum into event activities, underscores the importance of Microsoft TechSpark’s involvement.

Microsoft’s involvement has been instrumental in capitalizing on its reputation to facilitate strategic dialogues, such as the one facilitated by the TechSpark Coach. These discussions focused on exploring strategies for developing and maintaining a local STEM and R&D talent pipeline, with the goal to foster a dynamic local entrepreneurial ecosystem.

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

Idaho Women for Education
Digital Skills for women in Boise, Idaho

Local opportunity
Idaho has the highest female incarceration rate in the United States according to the annual report of the Federal Bureau of Statistics. Improving opportunities for all disadvantaged women, especially those with the added obstacle of being justice-involved.

Engaging the community
Idaho Women for Education quickly identified the gender divide especially when it came to women learning digital skills.

In partnership with the National Women’s Business Center Network and Idaho Justice Project, we launched two digital skills programs Business Plan Basics and ConnectHER: Digital Skills Basics. Offering classes and a 3-part series that cover the fundamental skills women need to thrive in today’s digital economy. This program utilizes resources offered by Microsoft Learn and LinkedIn Learning. This series covers working with computers and devices, collaboration online, Artificial Intelligence (AI) tools, and getting started with Microsoft 365.

Since our engagement with Microsoft TechSpark, we have been invited to meet with lawmakers, the Department of Corrections, and many public and private businesses. Establishing these partnerships is essential to our continuing to provide services in the community.

Digital Transformation in Northwest Central Indiana

Local opportunity
The Internet of Things (IOT) is embedded in the physical world and connects it with the digital. It can enable physically oriented sectors like agriculture and manufacturing to finally realize all of the benefits of digitalization in their operations. But in the midst of that revolution, IOT is itself undergoing a transformation. Powered by rapidly evolving AI (Artificial Intelligence), IOT is becoming Physical AI: Socio-technical systems that can give human users a deeply interactive, intelligently-guided relationship with the physical world.

In rural areas that historically suffer from the digital divide, such tech-enabled opportunities can be overwhelmed by challenges. The Wabash Heartland Innovation Network (WHIN)’s task is to help its community, especially the farmers and manufacturers that are the backbone of the regional economy, to overcome those challenges and become leaders of the Physical AI revolution.

Engaging the community
Thanks to TechSpark, WHIN is engaging Microsoft in conversations about how they are extending productivity gains that are being made possible by generative AI to Physical AI–and how farmers and manufacturers in the WHIN region can help to move Physical AI forward.

But IOT and Physical AI have big implications for other community needs. Thanks to TechSpark, WHIN is also expanding its work to include K-12 school safety, starting with a basic IOT project that connects devices to a LoRaWAN network in a rural elementary school to summon help quickly when there is a classroom emergency. During the current pilot, participating classrooms are using the devices to gather data to document the kinds of emergencies that occur. This will help WHIN to determine how best to enhance the system to meet school needs.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
- New Market Elementary School
- Montgomery County Sheriff
- Microsoft

Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.
- In-person meetings with Microsoft to seek common ground in Physical AI
- 1 school district running pilot
- 27 school districts pilot results shared
- 12 school staff and first responders learning about IOT

In the news
Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth
- January 2024: Beyond Business: Principal® Provides Office Space to Pi515

“Being part of WHIN’s Microsoft TechSpark Project is giving our school a new perspective on how technology can support school safety.”
Alison Karrfalt, Principal

“WHIN would like the TechSpark project to lead to more awareness of how IOT can address community-level problems like school safety. As IOT becomes powered with rapidly evolving AI, those benefits will be even more important.”
Pat Corey
Microsoft TechSpark Fellow Indiana
Local opportunity
Lack of digital inclusion in communities hampers access to essential services and opportunities, widening social and economic disparities. Failure to address this issue will deepen the digital divide, leaving underserved individuals isolated and hindering overall community progress.

Engaging the community
IBSA, Inc. has led transformative efforts on the topic of digital inclusion, presenting significant opportunities for community advancement. Leveraging Microsoft’s reputation and global expertise, particularly in areas like generative AI, they spearheaded virtual discussions on inclusive participation in the AI economy.

IBSA plays a pivotal role in developing digital access strategic plans for Topeka and Unified Gov’t Kansas City, while also serving on the State Advisory Board for the state Digital Equity Strategic Plan. Establishing the digital equity consortium, TSC Get Digital, and utilizing the Microsoft Digital Equity Dashboard to gather crucial data and partnering with EveryoneOn for affordable offers.

Their engagement with local elected officials, chamber representatives, and economic development agencies underscores their dedication to fostering collaboration and driving progress. As active participants in community meetings, they serve as a crucial voice advocating for inclusive policies and initiatives. This proactive approach is yielding tangible results, as evidenced by the increasing frequency and depth of community discussions and partnerships.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
- Growth Organization of Topeka
- Greater Topeka Partnership
- Topeka & Shawnee County Public Library
- Gil Carter Initiative
- Kansas City Kansas Community College
- Wyandotte Economic Development Organization
- City of Topeka
- USD 500 (KCK)
- EveryoneOn
- Microsoft

Impact to date

SOAR (Shaping our Appalachian Region)
Digital Inclusion in Appalachian Region, Kentucky

Local opportunity
In the heart of Appalachia, where opportunity can feel scarce, a beacon of hope is rising. With over 30,000 Eastern Kentuckians yearning for employment while facing a landscape of only 2,500 available job openings, the challenge is clear. However, the Solutions for Our Appalachian Region (SOAR) project is stepping up to close this gap, leveraging the power of remote work opportunities available online.

Engaging the community
In late 2023, SOAR’s (Shaping our Appalachian Region) Office of Digital Equity launched a pioneering digital skilling program to equip Eastern Kentuckians with essential skills for the digital workforce, featuring Microsoft Office and Artificial Intelligence (AI) training to navigate today’s tech-driven world. Hosting Microsoft TechSpark representatives in November 2023 and January 2024 underscored SOAR’s dedication to partnership and innovation.

Through securing substantial funding:
- $500,000 from the Trust Foundation for advanced digital skilling
- $400,000 from the USDA for broadband planning in Pike County, KY
- $1.4 million from the U.S. Department of Labor for tailored IT training

This concerted effort is driving economic empowerment and fostering resilience in Eastern Kentucky, promising a brighter future under SOAR’s leadership.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
- Commonwealth of Kentucky Digital Equity Office, National Digital Inclusion Alliance, Connect Humanity, Toyota Tsusho, County libraries, Local Internet service providers (Peoples Rural Telephone Cooperative, Mountain Rural Telephone Cooperative, and Foothills Communications), Community action agencies, Cooperative extension offices, K-12 Partners, Postsecondary education specifically the Kentucky Community and Technical College System, and Microsoft

Impact to date
Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.
- 135 Digitally Skilled
- 5,000 Individuals signed up for FCC’s Affordable Connectivity Program
- $2.3 million funding from other organizations

SOAR
NOLAvate
Digital Skilling in New Orleans, Louisiana

Local opportunity
NOLAvate Black’s Tech Talent Survey sheds light on the unmet skilled STEM Worker needs in New Orleans. The survey data revealed a need for Training and continuing education, highlighting the need for skill-building programs and resources. Entry level apprenticeships suggesting a desire for opportunities to gain on-the-job training. Mentorship and career coaching indicating the importance of guidance and support. Assistance in navigating the technology industry, pointing to the complexities faced by individuals. Bias and hiring challenges, highlighting persistent issues of discrimination faced by BIPOC professionals.

Engaging the community
NOLAvate Black’s Explore Tech is a 6-week professional development program for entry-level and early-career BIPOC professionals. Participants attend weekly sessions and are paired with a mentor to help them get hired in the tech sector. Skills assessments are administered to align participants’ skills and goals to develop a personal career plan. Graduates are placed in a paid position with an employer partner committed to building diverse and inclusive teams.

“We were able to leverage our collaboration with Microsoft TechSpark to engage the community around moving the needle on digital equity.”
Sabrina Short
Microsoft TechSpark Fellow Louisiana
Local opportunity
There are systemic disparities in computer science education across our state that include issues of access, representation, skills gaps, and curriculum coverage. By prioritizing underrepresented groups and providing opportunities for hands-on experience and industry connections, the playing field can be leveled so that we can prepare all students for success in this digital age.

Engaging the community
CSforMA Inc. leverages CSforAll SCRIPT to facilitate District Visioning, Standards Gap Analysis, and Curriculum Identification, and planning for Educator Professional Development. This year, they worked with 15 districts, comprised of over 100 team members, that participated in a series of workshops to develop comprehensive plans to build capacity in their district and ensure student success.

One key initiative involves connecting under-represented students with industry professionals to increase their awareness of and skill development for computing careers. They facilitate meetings at local venues, review curricula and products for school use, and leverage Microsoft connections for programmatic insights.

To this end, CSforMA has launched a pilot of a Flipped Internship Program in Chelsea Public Schools, modeled after the successful Burlington program. This initiative provides students with hands on experience, mentorship, and certification opportunities in partnership with industry leaders.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
- MA Dept of Elementary & Secondary Education
- MA Association of School Superintendents
- MA Business Alliance for Education
- 17 school districts
- Whale Rock Capital
- Takeda Pharmaceuticals
- Microsoft

Impact to date
Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.
- 18 Flipped Internship Program students
- 100 team members from 15 school districts participated in 5-days of workshops
- Over 100 Educators currently registered for CSforMA Summer Institute workshops
- $X Additional Funding

“Grounded in the belief that all teachers can learn and teach digital literacy and computer science principles to their students, CSforMA consistently brings forth new initiatives for district consideration and professional development opportunities for teachers of all content areas.”
Denise Matuszczak, Springfield Public Schools

“Our partnership with the Flipped Internship Program not only empowers students to see themselves as computing professionals but also facilitates connections with industry experts. These professionals provide valuable insights into college and career opportunities, helping students chart their paths toward success.”
Deborah Boisvert, Microsoft TechSpark Fellow Massachusetts
Local opportunity

The lack of coding education leaves students unprepared for today’s digital world. Coding skills are essential for innovation and career advancement in various industries. It is critical to provide young adults with the career development and technical skills needed to launch careers in tech.

Engaging the community

Code in the Schools launched a series of initiatives that provides youth between the ages of 16-24 with paid internships and opportunities to gain entry-level tech certifications. These efforts will be sustained through cultivating industry relationships, which is made easier through our relationship with Microsoft TechSpark.

As part of their afterschool program, they developed a Machine Learning and AI track, leveraging Microsoft AI LinkedIn Learning Career Pathway. Four students participated in this 56-hour course.

They also developed relationships with CISO and CompTIA to provide certifications for students and staff.

The CodeWorks program is a pilot extension of the summer technical career exposure program where interns are paid to gain technical skills, industry related certifications, and work experience. Seven interns participated in the program with:
- 2 working on certifications in Python
- 1 working on a certification in web development
- 2 working on developing front-end development skills
- 2 working on development skills in gaming development

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

“My year has been a blast, I’ve gotten to dive deeper into my field of study, computer science. So far, this is an amazing experience.”

CodeWorks Participant

“In order to prepare today’s young adults for the jobs of the future we need strong partnerships with industry. Partnerships like Microsoft TechSpark gives nonprofits the resources and leverage we need to bridge the gap between education and careers for our under-represented students.”

Stephanie Alphee Microsoft TechSpark Fellow Maryland
Local opportunity
Expanding computer science (CS) education is essential for preparing students for the digital age and fostering innovation. Without access to CS education, students may face a skills gap, limited opportunities, and stagnated innovation. Expanding CS education is crucial for equipping future talent with the skills needed for success in the modern economy.

Engaging the community
Educate Maine has expanded the work of their Project>Login Program. This program is the state’s leading resource for anyone interested in the computing and IT field. The program connects education with technology careers in Maine. Through outreach, advocacy, and collaboration, it prepares students for postsecondary learning and the workforce. This program serves as a clearinghouse for information about events and opportunities in computer science and IT.

In collaboration with Microsoft TechSpark, Educate Maine’s programming leverages Microsoft for Nonprofits, Microsoft Digital Equity Dashboard, and Microsoft MakeCode.

Educate Maine’s partnership with Girls Who Code focuses on attracting more girls to computer science classes and fields of study. They are gearing up to expand Girls Who Code summer camp experiences to all 16 counties across Maine as well as planning for the CS Summer of Fun PD Week for teachers which includes the inaugural CS Leadership Summit.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

Community tech hubs that offer residents and families increased access to digital technologies and upskilling opportunities are essential to achieve digital inclusion in underserved, under-resourced communities like Detroit, MI. It empowers individuals to navigate the digital world, access online resources, and pursue educational and employment opportunities. Moreover, it serves as a nexus for community engagement.

Engaging the community
Sistahs Reachin’ Out (SRO) is excited to open their tech hub – The Career and College Access Center (CACAC) – this Summer 2024. This center will serve families and residents throughout Detroit’s District #2. With the aim to upskill underserved community members toward increased access to higher education and transformative employment opportunities, through the CACAC SRO will mete out its mission to effectuate economic equality for economically challenged residents through digital access and equity.

The CACAC will feature free access to a digital media lab staffed with 24 high-speed internet-enabled computer workstations, an upskilling curriculum that includes training in Generative AI, and the Co-Lab -- a community Co-working space. SRO successfully secured a two-year $550,000 grant from Michigan’s Office for Labor and Economic Opportunity.

The partnership with Microsoft TechSpark, played a pivotal role in securing this funding. With a focus on digital upskilling, we’re committed to advancing economic mobility and security. Thanks to the support of Microsoft TechSpark fellowship, they’re poised to make significant strides in enhancing digital access and equity for underserved Detroikers. Bringing about tangible change for the community.

Income inequality for marginalized groups is a pressing challenge that undermines social equity and economic stability. Addressing this issue is crucial for fostering a more equitable society where all individuals have equal opportunities for economic success.

Engaging the community
TechFluent addresses income inequality by providing mentorship and training in Microsoft Dynamics 365 and Power Platform. They tackle the lack of tech education and opportunities for marginalized groups by providing laptops, virtual training, hands-on experience, mentorship, career services, and Microsoft Learn certifications.

The collaboration with Microsoft TechSpark helped expand their enrollment fourfold, offering foundational and advanced training through TechFluent Academy.

Leveraging Microsoft for Nonprofit, Microsoft Learn, Microsoft Learn Career Connected, and Microsoft Global Skills Initiative resources, they’re providing specialized paths in Dynamics 365, CRM/Power platform, Business Central, Finance, and Supply Chain Management, and Power BI.

Microsoft’s support facilitated connections to FutureFIT AI and LinkedIn. Enrolling 100 individuals into a 6-month custom training plus utilizing Microsoft Learn, they’ll graduate Microsoft certified. We aim to attract 1,000 applicants.

Montana is a very large state with a very low population density, access to broadband is essential for accessing training and in-demand jobs. While Montana ranks last among states with only 72% of people having access to high-speed broadband, that coverage is even worse for the state’s tribal communities.

Engaging the community

Accelerate Montana supports inclusive economic prosperity for Montanans through workforce and economic development programs. By providing awareness of broadband inequity, they aim to use access to broadband to bring more workforce training and job opportunities to Montana’s Tribal community.

They are partnering with Tribal Broadband Bootcamp to bring opportunity to the Tribal communities. This boot camp provides networking and hands-on training to all Tribal communities at no charge.

Microsoft TechSpark shared the Microsoft Airband Digital Equity Dashboard to highlight the digital inequity for the reservations in Montana. This helped partners in the state better understand the challenge we are trying to address and helped garner excitement for opportunities in ahead. Montana Tribal Communities will have the opportunity to learn more about broadband. The networking opportunity will provide tribal leaders opportunity to ask questions regarding access and funding. Tribal members will have the training to help when internet providers go through Tribal land. Better internet access will positively impact Tribal member’s quality of life.

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

Nonprofits not leveraging technology miss out on vital opportunities for efficiency, outreach, and impact. Embracing Digital Transformation is essential for nonprofits to maximize their potential, streamline operations, and create efficiencies to better serve their communities.

Engaging the community
Apparo’s Tech Therapy program supports nonprofit organizations in transforming their digital capabilities by providing pro bono tech advice & resources to help with overcoming the challenges that nonprofits face with limited or no staff dedicated to technology.

For many of our nonprofits, Tech Therapy is the first service they use from Apparo. Tech Therapist’s advice nonprofits and provide knowledge to help them find resources & solutions to address their technology challenges. A Cybersecurity Resilience cohort pilot was added, funded by Bank of America. This offers security awareness education, security assessment w/scorecard, and a follow-up meeting with each NPO to give recommendations & remediations that will help enhance their security posture. Currently, we are creating an AI Strategy Playbook for Nonprofits which will give them a base of where to begin, what tools to use, use case examples, along with an AI policy template.

Apparo is transforming nonprofits through technology with a free technology maturity model that shows a nonprofit’s current state. Apparo leveraged Microsoft LinkedIn Learning, Microsoft Digital Skills Center (TechSoup), webinars, and white papers to educate the Apparo team as well as sharing this information with the nonprofit community to help on their Digital Transformation journey.

Activating local ecosystems

United Way Nashua’s
Digital Inclusion in Nashua, New Hampshire

Local opportunity
United Way Nashua serves an 11-county region with 200,000 residents and is addressing the digital divide – a problem stemming from unequal access to broadband and technology resources. It needed attention because it disproportionately affected low-income individuals’ interactions with the digital world. It is essential for all members of the community to have better access to services, learning opportunities, jobs, and healthcare, and to stay connected to families and friends.

Engaging the community
United Way Nashua’s “Tech Connect United” program bridges the digital divide by enhancing broadband and tech accessibility in the community. By leveraging the knowledge gained from Microsoft TechSpark and the reputation of Microsoft’s brand, they successfully secured funding to bolster their efforts. By conducting local surveys and mapping, they learned that broadband was available in most areas but the number of people who have access to devices varied widely by community.

Tech Connected United partnered with:
- PCs for People to secure donated refurbished laptops and discounted

Microsoft Office licenses to provide community members with devices and software
- Volunteers assisted with signing up for low-cost broadband services and learning digital skills
- Digital Navigators provided 1-on-1 sessions
- State leaders leveraged a $5 million federal grant to create the Greater Nashua Digital Equity Coalition to develop a comprehensive four-year New Hampshire digital inclusion plan

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

In response to the identified community opportunity, business development programs were needed to empower minority-owned businesses through technology. Businesses need not only to enhance their digital presence but also to streamline their operations, making them more efficient and competitive in the digital age.

Engaging the community
Urban Food Alliance created a small business development program leveraging Microsoft technology. Microsoft 365 was deployed to elevate productivity and foster collaboration. Microsoft Dynamics was instrumental in enabling small businesses to automate mundane tasks using Microsoft Power Automate platform and Microsoft Copilot to make self-service enabled customer service AI bot, thereby freeing up valuable time to focus on strategic growth initiatives. These technologies were carefully selected to address the unique needs of their community, ensuring that program participants could achieve tangible improvements in their operations.

Leveraging Microsoft TechSpark in the community forged valuable connections and bolstered their offerings to small businesses. The Microsoft affiliation has been invaluable, lending credibility and instilling confidence among local business owners who are increasingly looking to trusted technology solutions to drive their growth.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
- Nassau County Muslim Committee
- Synesis IT
- Microsoft

Impact to date

The Community Foundation of Southern New Mexico (CFSNM) to address the pervasive broadband issue in Dona Ana County. CFSNM seeks to collaborate with grantees and is open to understanding how they can provide more support related to the program supported by this grant.

Engaging the community

CFSNM has engaged with several organizations including the Mycelia Foundation, Raices del Sabar (a charter school focused on bilingual education), Borderplex Connect, Dona Ana County – IT services, and the Community Foundation of Southern New Mexico.

Bold Futures leads policy change, research, place-based organizing, and culture shift by and for women and people of color in New Mexico. They center on the lived experiences and expertise of those most impacted by an issue, engaging with people at the intersection of their identities.

Empowerment Congress facilitates a community leadership development program for community leaders and youth leaders. They support community leaders’ efforts to create policy-changing campaigns, engage in policy advocacy, and organize community projects.

Activating local ecosystems

The CFSNM team has partnered with the Mycelia Foundation, a nonprofit focused on tech expansion in a charter school for Spanish-speaking families. The partnership with the Mycelia Foundation has seen substantial progress in community engagement efforts. Mycelia’s work with Raices and support from local entities are key to efforts to bridge digital divides, improve education, and stimulate economic growth. Mycelia’s commitment to community development is clear in its strategic focus and their partnership with Raices.

Impact to date

Significant progress has been made in community engagement, network expansion, and identifying potential collaborations.

Ongoing dialogue with Bold Futures and Empowerment Congress aims to involve youth in their empowerment programs. The community and local ecosystem engagement have been productive, and there is optimism about the potential impact of these collaborations on the community.
Dress for Success
Digital Skills in Northern Nevada

Local opportunity
Empowering women with digital skills in northern Nevada is crucial for fostering economic growth and enhancing workforce diversity. By equipping women with digital expertise, we open doors to expanded opportunities in a rapidly evolving digital economy. Closing the digital skills gap paves the way for a more inclusive and prosperous Nevada for generations to come.

Engaging the community
Dress for Success Reno – Northern Nevada launched the Skills for Success program, specifically designed to empower underemployed women by enhancing their digital skills. In this program, participants can choose multiple learning pathways including technical and soft skills. Through collaboration with Microsoft TechSpark, they leveraged the Microsoft Skills Initiative to create this virtual skilling program. Women participating in this program are acquiring LinkedIn Learning certifications. These certifications serve to bolster their technology expertise and knowledge, equipping them with success in the ever-evolving digital landscape.

**Local opportunity**

In Western New York (WNY), significant barriers exist when it comes to accessing tech and tech-aligned training opportunities. Specifically, challenges related to childcare hinder participation in the local tech ecosystem, especially for underrepresented individuals. By addressing these barriers and fostering inclusivity, we can empower individuals to contribute to a stronger and more diverse technology community.

**Engaging the community**

TechBuffalo is piloting Family Code Nights, a family-based approach that introduces basic programming concepts through a shared guardian-and-child Minecraft Education experience, while also providing adults with ample resources to the broader Western New York (WNY) tech ecosystem. Through this intentional paired learning approach, TechBuffalo hopes to reduce a barrier to learning about and accessing training opportunities – childcare and its subsequent costs. This program will focus on reaching communities historically underrepresented in tech.

TechBuffalo leveraged the Minecraft Education team to help design and implement the program. For adult learners, they showcased LinkedIn Learning pathways.

We leveraged Microsoft TechSpark Coach and Microsoft TechSpark Fellow, Educate Maine, for advice in shaping the program.

Microsoft opened doors within its own ecosystem and brought together a broader range of stakeholders – ranging from elected leaders to local nonprofits – to learn more about TechBuffalo and their partnership with Microsoft TechSpark. It raised their profile within WNY, enabling them to reach a broader audience to share resources and lessons learned.

**Activating local ecosystems**

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

Richland Community Development Group
Computer Science Education in Mansfield, Ohio

Local opportunity
In Ohio, uniting businesses, government entities, K-12 school districts, and higher education around the common goal of creating and sustaining a digital education ecosystem is essential.

Engaging the community
Richland Community Development Group is uniting their digital education ecosystem. Learning from Microsoft TechSpark helped to create multiple programs that build Richland County’s ecosystem:

- **Girls Who Code Community Partnership**: Five clubs formed with 40 students engaged.
- **Teacher Technology Boot Camp**: Six technology-oriented business visits, creating curriculum lessons and receiving graduate-level credit through Ashland University
- **Code a Carnival Camp**: Hosted at North Central State College leveraging Microsoft MakeCode curriculum
- **179th Cyberspace Wing**: Facilitating an Electronics for Beginners summer camp
- **Cybersecurity Certificates**: Assisting Ohio State University in creating certificates

Utilizing the expertise gained through collaborating with Microsoft TechSpark strengthened Richland Community Development Group’s reputation.

The Empowering Communities Playbook played a critical role to help facilitate community conversations, implement new programs, and build ecosystems to sustain programs that drive local impact.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- Mid-Ohio Educational Service Center, North Central State College, The Ohio State University at Mansfield, 179th Cyberspace Wing, Dallas Design & Technology, ES Consulting, Avita Health System, DRM Productions, Inspirations Academy, Madison Comprehensive High School, Springmill STEM Elementary School, and Microsoft

Impact to date
Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.

- 40 – 3 thru 12th grade students enrolled across 5 Girls Who Code clubs.
- 15 teachers exposed to local technology career pathways;
- 15 high school students receive an intro to Arduino programming;
- 25 middle school students Code a Carnival

Utilizing the expertise gained through collaborating with Microsoft TechSpark strengthened Richland Community Development Group’s reputation.

Black Tech Street
Digital Inclusion in Tulsa, Oklahoma

Local opportunity
Hack the Future: Greenwood is an event to pilot what exposing and educating black and marginalized communities about AI looks like at scale and in a way that catalyzes holistic AI adoption, application, and ecosystem development (AI transformation).

Engaging the community
Black Tech Street hosted Hack the Future: Greenwood aimed at introducing AI to black and marginalized communities at scale, catalyzing holistic AI adoption and ecosystem development. This event showcases AI’s transformative potential in crucial areas of black life.

Over 100 participants, including members of the historic Black Wall Street community, explored ChatGPT’s capabilities across six vital domains: Entrepreneurship, creative expression education, spirituality, community development, and social justice. The event featured panels the national AI landscape and its implications for creators and entrepreneurs, headlined by Olivia Zhu, Senior Policy Administrator on AI at the White House Office of Science and Technology Policy.

Zhu emphasized the Biden-Harris Administration’s commitment to leveraging AI’s benefits while mitigating risks, stressing the importance of community engagement, exemplified by events like Hack the Future Greenwood. This event propels Greenwood’s AI ecosystem, aspiring to make it a national exemplar for ethical AI use.

Microsoft including Microsoft TechSpark helped pilot what will be the bedrock of an AI ecosystem model that will hope to be used to scale AI transformations to other Black and marginalized communities.

Local opportunity

The current dilemma is that the youth are underserved and have limited access to career education and technology resources. This creates a cycle of digital divide resulting in low-income and excluded youth falling behind in our digital world.

Engaging the community

Integral Youth Services (IYS) services the Klamath Basin which is home to 69,000 residents and is addressing the digital divide among youth. IYS created a Digital Hub where youth could learn new digital skills. The hub included 20 laptops, Smartboard, and cameras. The hub exposed youth to Microsoft 365, Microsoft Minecraft for Education, and LinkedIn. Guidance from Microsoft TechSpark opened the doors for Last Mile Fund Scholarships to help with transportation costs for youth.

The collaboration with Microsoft and leveraging their reputation has driven IYS as a front liner for digital skilling for youth in the Klamath Basin.

IYS has also leveraged partnerships with Klamath Community College, Oregon Tech, and our local public-school districts. IYS plans to utilize this partnership to leverage additional funding with our local community Health Care agency, and foundations such as Ford Family and Murdock Trust.

Activating local ecosystems

An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

- Klamath Community College,

TechSpark Fellow Oregon
Local opportunity
The lack of resources and opportunities for tech-related entrepreneurship in Luzerne County, Pennsylvania, hampers economic growth, stifles innovation, and perpetuates reliance on traditional industries. Failure to address this issue risks falling behind in the global economy, losing skilled talent to other regions, and perpetuating economic stagnation, ultimately hindering long-term prosperity and competitiveness.

Engaging the community
Greater Wilkes-Barre Chamber of Business & Industry is launching the Luzerne County TechCelerator program. This ten-week program will provide early-stage entrepreneurs with essential resources, including educational workshops and personalized mentoring sessions, covering critical topics such as business models, customer development, financials, funding options, and legal considerations. They aim to tailor the curriculum to meet the specific needs of the entrepreneurial community.

Microsoft TechSpark has ignited enthusiasm for Digital Transformation and innovation in our community, fostering a dialogue around the needs of tech entrepreneurs.

Collaboration with Microsoft TechSpark has enabled us to establish a partner collaborative of organizations with experience in running TechCelerator programs in other counties, to be involved in tailoring the program, curriculum, and logistics to best fit the needs of our community in Luzerne County. This involves doing in-depth funding planning to determine the best source that will allow us to provide this opportunity in an ongoing capacity, ensuring sustainable impact.

The community is extremely low-income, first-generation immigrants from Latin America who may be working in dangerous, unstable, exploitative jobs where the incidence of wage theft is recurrent. Most have limited education attainment and have little exposure to technology. The combination of these factors limits them from improving their life situation.

Engaging the community

Fuerza Laboral, “Overcoming the Technology Gap” is a program aimed at enhancing computer and digital literacy, with a bilingual approach, to empower individuals in navigating the digital era confidently. The program covers a wide range of essential skills, including proficiency in online work-related systems, tips in civic engagement in the digital age, resume writing techniques, LinkedIn navigation, webs-based job searches, and introduction to Artificial Intelligence (AI).

Through this program, we integrate four key components:
• Basic internet concepts
• Usage of online legal tools
• Finding a job online
• Introduction to Artificial Intelligence

In addition, the program incorporates principles from LinkedIn Learning, Microsoft 365, and Microsoft Edge. This program shows commitment to equipping people with the knowledge and confidence needed to thrive in the digital age.

Leveraging Microsoft TechSpark accelerated a transformation journey for the community, catalyzing deeper collaboration to enhance community engagement.

Activating local ecosystems

Entrepreneurship is key to sustaining a growing community for many reasons: Providing jobs, promoting growth, refining skills, and inspiring innovation. As Rapid City and the Black Hills region experience explosive growth, entrepreneurship is a pivotal component that has not grown in-kind. This is not due to a lack of entrepreneurial spirit but a shortage of early-stage resources. By bridging this resource gap, we can lift entrepreneurship throughout the region.

Engage our community
Elevate Rapid City spearheaded the establishment of Founder’s Hub in the community, aimed at fostering an ecosystem conducive to the growth of startups and small businesses. Central to this initiative is the accessibility of crucial resources within the community, including but not limited to, incubator/accelerator programs, financial support, mentorship opportunities, and other valuable resources. By addressing the community’s demand for entrepreneurial support, they not only stimulate the program but also promote digital inclusion. Founder’s Hub serves as the pivotal resource driving empowerment within the startup community. This platform enables them to furnish the expanding SaaS community with essential support from the outset of their journey while ensuring continued access as they progress. Alongside Founder’s Hub, the strategic engagement with Microsoft TechSpark has proven instrumental in fortifying their ecosystem-building initiatives.

The collaboration between Elevate, Wildfire Labs, and Microsoft TechSpark plays a crucial role in enhancing our comprehension of successful startup ecosystem tactics.

Activate our ecosystems

Chattanooga Chamber
Digital Transformation in Chattanooga, Tennessee

Local opportunity
Revitalizing Chattanooga’s tech entrepreneur scene is vital for the city’s future. Expanding this ecosystem, allows for economic growth, attracts talent, and creates sustainable opportunities for years head.

Engaging the community
The Chattanooga Chamber and the strategic marketing partnership with Brickyard, a leading venture capital firm, has not only showcased Chattanooga as an attractive destination for entrepreneurs but also facilitated the influx of new firms through Brickyard’s investments. This collaboration has bolstered the startup ecosystem, leading to measurable growth and increased opportunities for startups to reach series A metrics.

The ongoing investments in the INCubator demonstrates the commitment to nurturing local talent and fostering innovation. Through collaboration with ecosystem and government partners, the future of the INCubator ensures Chattanooga remains a thriving hub for entrepreneurial success.

Microsoft TechSpark’s involvement brought value to our efforts by providing invaluable expertise and resources in Artificial Intelligence (AI) integration. Through workshops tailored to our local startups, they gained practical insights on incorporating AI processes and tools to meet business needs effectively. Microsoft’s visits facilitated knowledge exchange, enabling advanced learning and unique approaches from other communities in building startup tech ecosystems. These interactions not only inspired collaborative ideas but also opened doors for future partnerships and programming enhancements to the INCubator, further propelling the mission of fostering innovation and growth.

Tech-Moms
Digital Skills in Ogden, Utah

Local opportunity
Addressing the gender gap in tech is crucial for innovation and diversity. Active encouragement and support for women to pursue careers in technology is needed to harness the full potential of diverse perspectives in shaping the digital future.

Engaging the community
Tech-Moms recognized the underrepresentation of women in IT and cybersecurity careers and took proactive steps to address this issue within their community. By creating a specialized 6-month bootcamp, they aimed to provide comprehensive tech training, enabling participants to obtain three industry-recognized certifications: A+, Network+, and Security+.

Private companies collaborated with Tech-Moms, offering feedback on curriculum, volunteers as mentors, and job interviews for graduates, showcasing their dedication to diversity and inclusion in tech.

Leveraging Microsoft’s reputation and support from Microsoft TechSpark, Tech-Moms strategically incorporated the company’s name in grant applications, discussions with potential employers, and conversations with state leaders.

This collaboration not only enhanced the credibility and visibility of the program but also facilitated access to additional resources and opportunities for the participants. Through their innovative approach and partnerships, Tech-Moms empowers women to transition directly into high-demand technical roles, thereby contributing to greater diversity and inclusion within the tech industry.

Activating local ecosystems

In Vermont, the digital divide presents a significant challenge, particularly for aging adults. As technology becomes increasingly integrated into daily life, those lacking access or proficiency in digital tools are at a distinct disadvantage. Bridging the digital divide is essential to ensure equitable access to technology, digital skills, and support for individuals in Vermont.

Engaging the community
Technology for Tomorrow’s (T4T) TechSpark Wednesdays training program works to close the digital divide by increasing digital literacy through community classes offered in collaboration with nonprofit partners who serve under-resourced populations including older adult, New Americans, and unemployed individuals.

T4T created a 20-class series for our TechSpark program. The 90-minute hybrid classes met weekly in Vermont at the South Burlington Public Library’s Digital Lab. Adult learners also can join virtually, ensuring the ability to access digital learning.

- Digital Literacy: Cohorts focused on basic digital literacy skills leveraging Microsoft 365 training.
- Generative AI: Cohorts centered on understanding and effectively using AI.

T4T opened the program by hosting a statewide roundtable with special guests from Microsoft TechSpark.

Local opportunity
Central Appalachia has been one of the nation’s least economically diverse regions. This directly contributed to a perennial 50th-place ranking in educational attainment. As a result, West Virginia has been deprived of the key resources for participating in the nation’s “knowledge” sector. This region needs to overcome this challenge.

Engaging the community
High Technology Foundation is developing an innovation and entrepreneurial ecosystem around the commercial climate and weather industry, the “Ecosystem,” by leveraging local NOAA operations involved in the collection and analysis of climate and weather data. The Ecosystem’s cloud computing and data science occupations are perfect for increasing educational attainment levels needed in the workforce. This “Big Data” advantage gives us a competitive edge, and our collaboration with local support services and universities aims to expand the sector, estimated to be worth billions.

Our “Cloud Data Analytics” program at WVU involves four professors using NOAA datasets and Microsoft Azure and Generative AI in their curriculums.

This program introduces students to the commercial potential of NOAA’s data and Azure’s environment, resulting in startup proposals. Microsoft TechSpark’s collaboration with NOAA, the NOAA Open Data Dissemination (NODD) program, supports our initiative.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:

Sharing the story more broadly is crucial as it allows others to learn from your experiences, fostering knowledge sharing and collective growth.
- July 2023: High Technology Foundation Selected as Part of Microsoft’s National TechSpark Program to Grow Economic Opportunity in West Virginia

“I’m amazed at the quality of opportunities we have identified through our involvement with Microsoft’s TechSpark initiative in just six months. I like to describe it as a “force multiplier” enabling us to drive change and increase our community’s participation in the digital economy. I’ve also found great motivation in learning about the efforts of the other Fellows. It is truly inspirational.”

The Trust for the Americas’ POETA
Digital Inclusion in Puerto Rico

Local opportunity
To empower entrepreneurs, addressing the digital skills gap is essential, enabling them to effectively utilize technology for productivity and integration into the digital economy.

Engaging the community
The Trust for the Americas’ POETA DigiSpark, implemented in partnership with Center for Puerto Rico, focuses on promoting local entrepreneurship digital skilling and Digital Transformation that is essential in the digital age.

With the help of Microsoft TechSpark, this program was able to reach several communities across the island, including Loiza, known as a representative locality of Afro-Puerto Ricans. In Loiza, training sessions in basic digital skills, life skills, and entrepreneurship were provided to a group of women interested in growing, starting, or enhancing their businesses.

POETA DigiSpark acts as an essential catalyst for personal and economic growth in the region. Thanks to key collaborators, the POETA DigiSpark program has been very successful.

Activating local ecosystems
An ecosystem is vital for fostering collaboration and innovation with communities, serving as a dynamic network where diverse stakeholders come together to drive collective progress. Ecosystem partners for this program include:
• Center for Puerto Rico, Interamerican University (Fajardo Campus), Eidos Global, Blacks at Microsoft (BAM), Danaliz Davila (a prominent community leader in Loiza), and Microsoft

Impact to date
Community Impact metrics evaluate how well initiatives improve communities, guiding decisions, fostering sustainability, encouraging collaboration, and empowering communities.
• 448 digitally skilled
• 183 economic opportunity through entrepreneurs

• February 2024: Trust for Americas and Microsoft implement TechSpark in Puerto Rico

“We often assume that we live in a world where technology is accessible to everyone, and these interactions allow us to see the reality of the lack of access.”
Sila M. Calderon Foundation, Center for Puerto Rico

“This exciting collaboration underscores our commitment to bridging the skills gap and fostering economic opportunities. In the upcoming training cohort, we’re integrating AI training to ensure participants are well prepared for today’s digital landscape.”
