Microsoft Teams Phone Calling

“Having everything in one platform is highly efficient and encourages more communication, more collaboration, and it’s easy to implement... From a technical standpoint... it’s going to save you time, effort, and money...”

CIO, Financial Services

Teams Phone is the only calling solution that is native to Teams and benefits from the full integrated experience with Microsoft 365, enabling you to call directly from Microsoft Word, Excel, PowerPoint, Microsoft Teams, and more – allowing you to make voice and video calls while staying within the flow of work.

Teams Phone’s integrated calling not only makes collaboration less cumbersome, but it can also actually save you valuable time.

With Teams Phone, you can enjoy a consistent and intuitive calling experience across devices, from basic desk phones to Teams displays

Teams Phone gives you the flexibility and convenience of using any device that suits your needs and preferences. **Get an overview of Microsoft Teams Phone along with calling capabilities by evaluating customer calling scenarios and business priorities.**

Choose the approach that’s best for you

Every organization is different, so this Engagement can be customized to fit your environment and goals. We can provide either of following scenarios: Select one, or multiple connectivity options including:

- Teams Calling Plans: Let Microsoft be your operator in an all-in-one cloud solution.
- Operator Connect: A fully managed solution that is fast and easy to deploy, allowing you to connect phone numbers from participating operators.
- Teams Phone Mobile: Integrate your users’ mobile identities, assign a single number, and implement a solution that works across network and devices.

- Direct Routing: Connect your SBCs to Teams Phone to use your own operator.

Take the next step today!
