Securing Business Resilience with Proactive Data Governance Framework

Microsoft Purview Data Governance POC Offer

Microsoft Solutions Partner

Proof of Concept Overview

The Confiz Data and Analytics team will review the pillars of data governance and explain why all three are critical for a successful strategy.

- People
- Process
- Technology

Our team will provide a deep dive into Microsoft Purview's features and demonstrate its impressive data governance capabilities. You will learn how Microsoft Purview helps you gain a deeper understanding of your data, establish a source of truth, and drive decisions based on data rather than opinion. Confiz and Microsoft Purview will help you gain insight across your data landscape.

Five-Day Schedule for Purview Data Governance POC

Microsoft Purview Feature Review – Confiz will provide a one-hour introduction to how Purview helps you manage and govern your data estate.

Data Estate Deployment – We will deploy a sample, end-to-end Modern Data Estate in your Azure infrastructure.

Data Source Ingestion – You can include a sample data source of your choice using the standard Purview connectors to be ingested into Purview.

Environment Configuration – Confiz will partner with you to configure a sample governance framework, including a data map, glossary terms, scan datasets, and pattern rules.

End-to-End Review – We will provide a one-hour review of the POC and Microsoft Purview features, including the ingestion and setup of your custom data source.

Results

Learn how Confiz and Microsoft Purview can help you:

- Maximize the value of your data assets and platform investment
- Establish trusted sources of information for your stakeholders
- Discover your data assets and democratize access
- Manage and classify sensitive data

Additional capabilities can be added for negotiated cost:

- Data Policies
- Data Sharing
- Audit
- Insider Risk Management
- Data Loss Prevention
- Information Protection
- Data Lifecycle Management

Confiz Roles:

- **Azure Infrastructure Engineer** to create the Azure PaaS components, deploy Purview, and work through any network-related issues.
- **Azure Data Engineer** with experience in Purview to configure and perform data extraction, ingestion, and troubleshooting any issues.
- **Data Architect** to lead the presentation, review of features, and end-to-end wrap-up.

Five-day Activities and Confiz Roles for POC:

- **Microsoft Purview Deep Dive (Data Architect -** 3 hours including prep)
- **Data Estate Deployment (Azure Infrastructure Engineer** - 16 hours)
- **Data Source Ingestion (Azure Data Engineer –** 8 hours)
- **Environment Configuration (Azure Data Engineer –** 8 hours)
- **End-to-End Review (Data Architect, Azure Data Engineer –** 3 hours including prep)
