Managed Detection and Response

Rising threats demand immediate action.

Future-proof your cyber security with Managed Detection and Response (MDR).

Millions and millions of connections happen every second between people, machines, apps and devices to share and access data. These interactions create exciting opportunities for how we engage with technology, and with each other - but they also create an ever-expanding attack surface with more and more vulnerabilities.

The security operations mission of protecting an organisations information and assets is becoming increasingly difficult. Attack techniques, frequency, and complexity are evolving fast. Security teams are under strain from the expanding breadth of defensive technologies, accelerating hybrid cloud adoption, and borderless, zero-trust networks. It has never been more crucial for enterprises to safeguard their critical data.

45%
of businesses worldwide will have experienced attacks by 2025.
(Gartner)

33bn
records expected to be stolen in 2023.
(Juniper Research)

277 days
average time a company took to respond to a cybercrime attack in 2022.
(IBM)

SoftwareOne Managed Detection and Response service for Microsoft Sentinel facilitates a comprehensive 24x7 threat protection solution delivering continual monitoring, detection, prevention, and response across our client's entire multi-platform, multi-cloud digital estate. We enable organisations to reduce risk, improve productivity and optimise cost with full visibility and control of their security estate.

software **One**

Let us guard your data, reputation and P&L.

Modernise your security posture and safeguard your people, data and infrastructure with an end-to-end managed solution built on M365 Defender, Defender for Cloud & Microsoft Sentinel.

Take control of your cyber security with full visibility of your entire IT estate and easily identify and respond to sophisticated and aggressive cyber threats.

Our expert team add security without contributing to your staffing overhead. We operate a dedicated Security Operations Centre (SOC) that 24x7 tracks data vulnerabilities globally to significantly reduce risk and prevent losses due to break-ins or employee errors.

Lower your total cost of ownership - get started faster while reducing infrastructure and maintenance whilst collecting data at cloud scale.

Benefits of SoftwareOne Managed Detection and Response service for Microsoft Sentinel

- **350+ pre-defined security use cases**
  We actively resolve incidents, reducing the workload for security professionals with both manual actions executed by SoftwareOne analysts as well as automated resolution driven by a library of pre-defined use cases for threat response.

- **Azure DevOps integration**
  Azure DevOps integration and solution deployment via C/CD pipelines. This capability enhances operational efficiency and strengthens our client's cyber security posture.

- **24x7 globally managed SOC**
  This ensures continuous access to expert security monitoring for our clients worldwide, regardless of their location and time zone.

- **Up-and-running in days**
  Leveraging automation, intelligent data analytics tools and a library of pre-defined scenarios, alongside our streamlined onboarding process means we can enable clients to swifty transition from setup to action .

Four steps to MDR success:

Collect
security data across your enterprise

Detect
threat with case threat intelligence

Investigate
critical incidents guided by AI

Respond
rapidly and automate your protection
