

MOXWAVE

YOUR BRIDGE TO SEAMLESS TRANSLATIONS

UNLEASH MULTILINGUAL POWER WITH MOXWAVE

MoxWave is your gateway to seamless translations in over 80 languages. This unified cloud-based API empowers businesses to break language barriers, connect with global audiences, and expand their horizons.

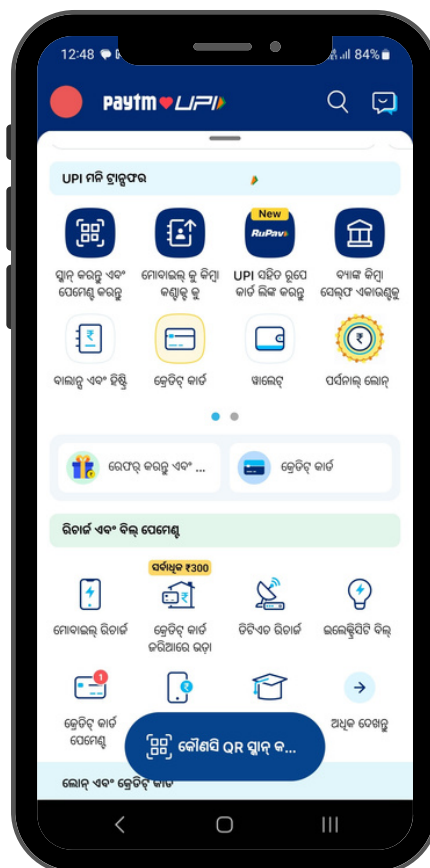

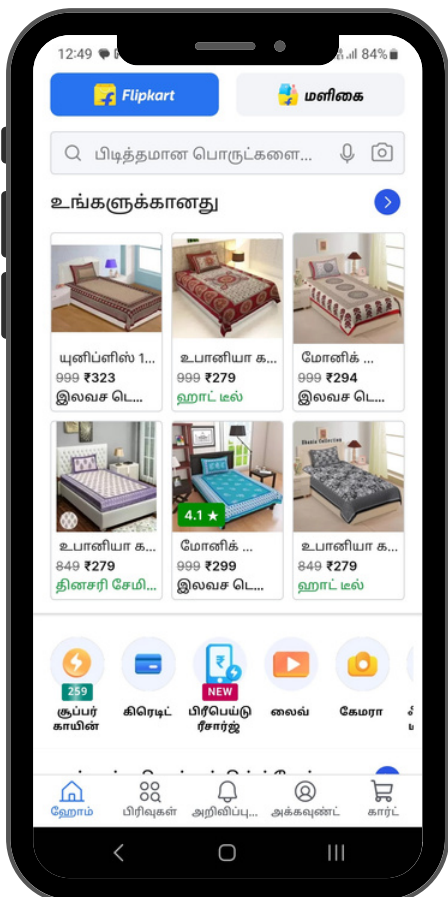

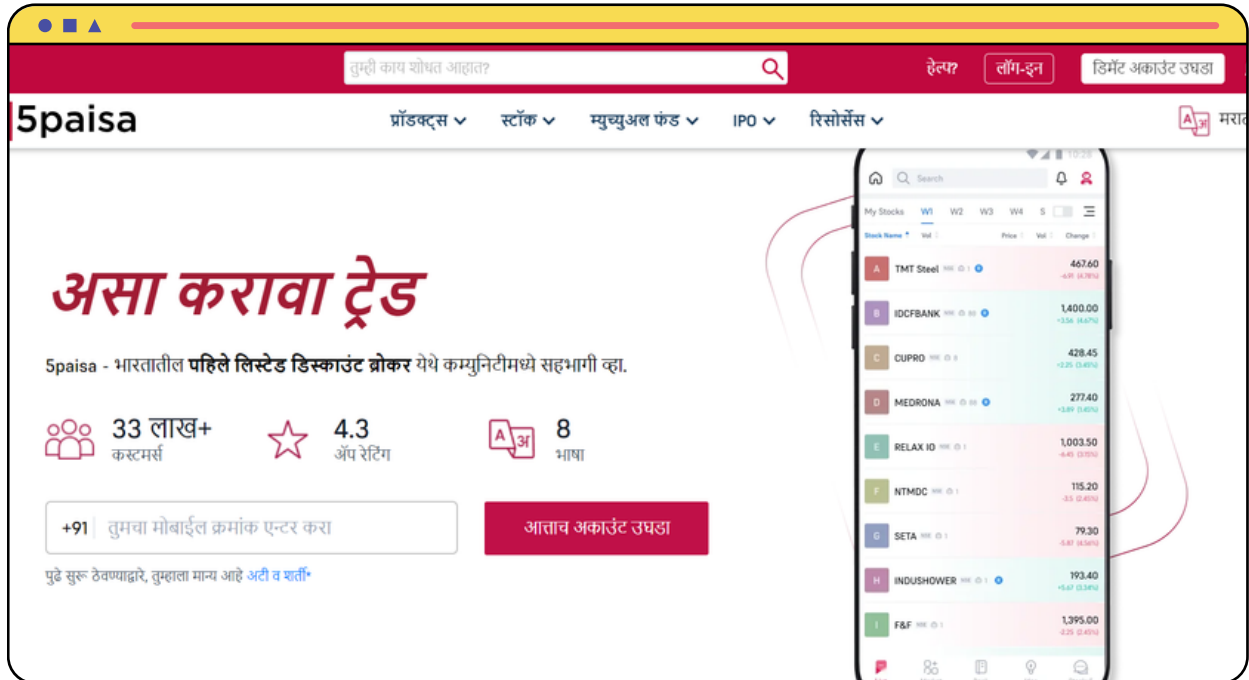

MoxWave has been designed keeping the various needs of complex businesses in mind. That's why, based on your command, through a single API, MoxWave can deliver machine translations, human-verified translations, and even transliterations. It also supports an impressive terminology feature that allows you added control over your translations.

At the core of MoxWave, is a context-sensitive technology that improves the translation quality with time. Its flexible design seamlessly integrates with all types of web and mobile applications, from any platform or programming language.

Here are some live examples of localized experiences powered by MoxWave:

Click to view: [Vodafone Idea's Customer Care Chatbot Vi, interacting in Hindi & Hinglish](#)

5Paisa's website translated in 7 Indian languages through MoxWave's automated translations

Flipkart and Paytm's mobile apps are currently live in 12 Indian languages, with human-verified translations from MoxWave

WHY CHOOSE MOXWAVE?

MANUAL TRANSLATION PROCESSES ARE BROKEN

Slow process
that wastes
precious time

Manual effort
required by Dev &
PMs at every step

Unscalable
process putting
large projects at
risk

Expensive &
error-prone,
impacting ROI of
project

LARGE SCALE API SERVICES PROVIDE LIMITED SUPPORT

No dedicated
customer support
to handle
integration &
issues

No control on
output for
customizations,
special changes

Lack of control
increases costs of
adding quality to
MT output

THE MOXWAVE ADVANTAGE

- Seamless web API for effortless integrations
- Cloud hosting over world-class infrastructure
- Exceptional scalability to grow & shrink as per need
- 24/7 availability for round-the-clock support

- HTTPS protocols
- IP whitelisting
- VAPT-certified service
- Customer-specific security keys for tailored measures

- Robust cloud-based architecture for speed, scale, & security
- Flexible data handling
- Versatile API compatibility, for effortless & comprehensive access

- Callback API to incorporate custom responses
- Endpoint choices to suit your needs
- Customizable pre and post-processing
- Terminology options for added quality control

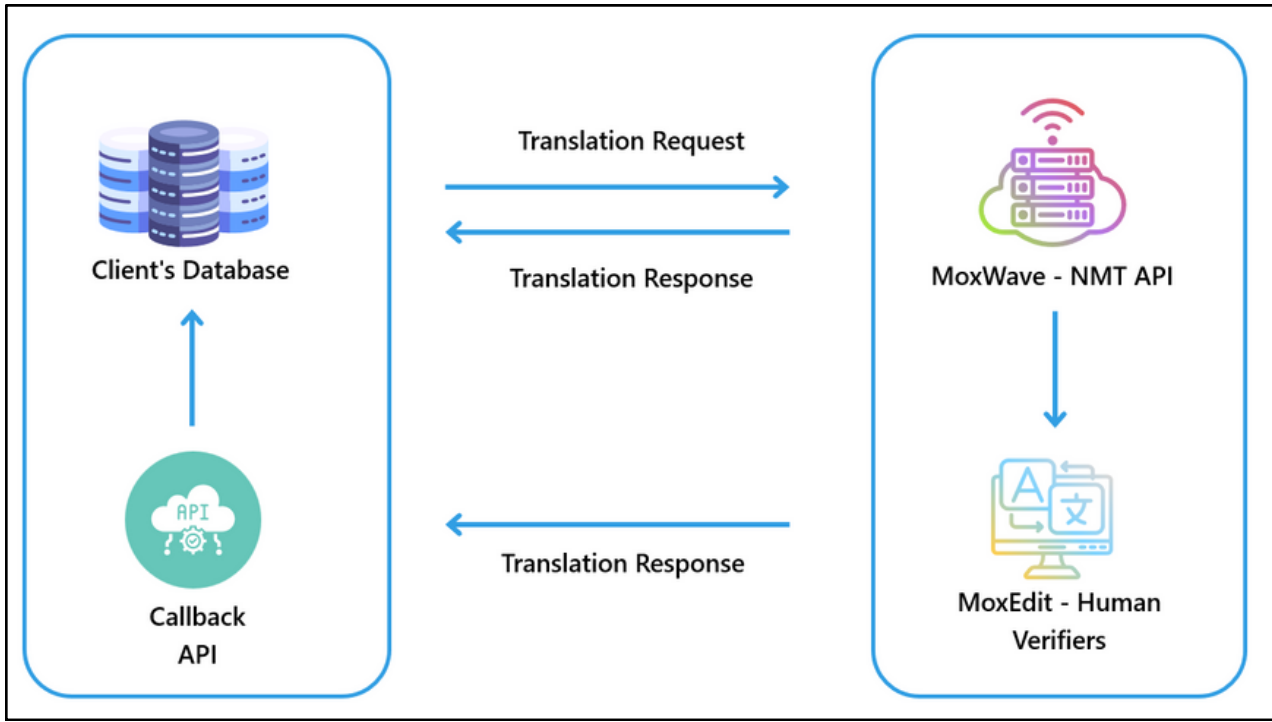

- Choice between Machine & Human translation
- Choice between Translation & Transliteration
- Context-sensitive translations
- Machine learning for improvements with time

- Online dashboards to analyze usage patterns
- Log reports for monitoring
- SLA reports for custom responses
- Translation memory for cost optimization

SYSTEM ARCHITECTURE

MoxWave is a restful API web service which is used to convert content between different languages using a calling sequence with multiple fields. It has the provision for requesting instant automated translations, or human verified translations, which are delivered using a Callback API, that needs to be published at the requestor's end.

As part of the calling sequence, a requestor can also indicate a priority for each translation request. All translations successfully delivered to a client can optionally be stored in their translation memory for reuse. The API also supports the setup of a custom terminology for each user, based on their branding & content requirements. This ensures quality and consistency in the translations.

MoxWave uses JSON as the format for data exchanges.

More....

OPTIMAL BALANCE OF TIME, COST & QUALITY

SAVE TIME

- Integrate directly in database or via CMS plugin
- Eliminate manual intervention in localization processes
- Create a centralized workflow for efficiency across departments
- Maintain alignment to agile development cycles

SAVE COSTS

- Save costs on repetitive translations across departments through centralised translation memories
- Achieve better resource efficiencies by eliminating redundant manual processes
- Ensure faster go-to-market at lesser cost

ENHANCE QUALITY

- Customize translation quality based on requirement (Machine vs Human-verified)
- Customize SLAs for translation requests, by choosing between 'Urgent or Regular'
- Implement your custom style guide & terminology requirements in the API and enhance translation accuracy based on your unique needs

CLIENT FEEDBACK

“Process Nine has been excellent in terms of service delivery and support, and helping us launch our localized products. After using their comprehensive language solutions & services and impeccable quality assurance techniques, we are now looking forward to maximize our reach across India through localization.”

Localization is the need of the hour and we needed a solution that would give us freedom and flexibility without any pains. After evaluating many options, we found the best fit with Process9. Their automated platform made website translation very easy and smooth for us. With next to no effort, we have added languages on our app and website, and everything is looking great. We have saved time, effort and money.

ABOUT PROCESS9

Process9 is Asia's leading language localization technology company, specializing in SaaS-based products and solutions for the localization industry. Their comprehensive suite of solutions covers a wide range of use cases, including website localization, mobile app localization, automated translation API, document translation, chatbot localization, video localization, Indian language voice bots, and Translation Management System.
