Cloud Center of Excellence

WHAT

Azure offers a vast array of possibilities, but this can also make the transition to the cloud complex. It's easy to overspend on what you need, or unintentionally introduce security risks through incorrect configurations.

That's why, at ConXioN, we have combined our experiences and expertise with a set of tools, frameworks, and services. All of this is based on proven best practices to help you harness the full potential of your cloud investments. We call this the Cloud Centre of Excellence, a holistic approach to effectively integrate and implement Azure within your organisation.

We offer a flexible trajectory with modular steps, tailored to your current needs and designed to evolve with your future growth. It also enables us to quickly adapt to predictable or unpredictable changes in your environment.

At the end of this journey, you will receive a detailed cloud strategy, an action-oriented roadmap, the development of your migration plan, and regular reports with insights for the continuous optimization of your cloud environment.

As a result, you are assured of scalability at every level. Both in terms of performance, cost efficiency, security, and innovation.

Cloud Center of Excellence

03 Succeed

In this phase, you manage a fully operational Azure environment, optimised by proactive monitoring for maximum security and cost efficiency.

Infra/Network Monitoring

Active monitoring and management of infrastructure and network performance. This ensures you have a scalable IT environment where we can proactively and dynamically manage your compute nodes.
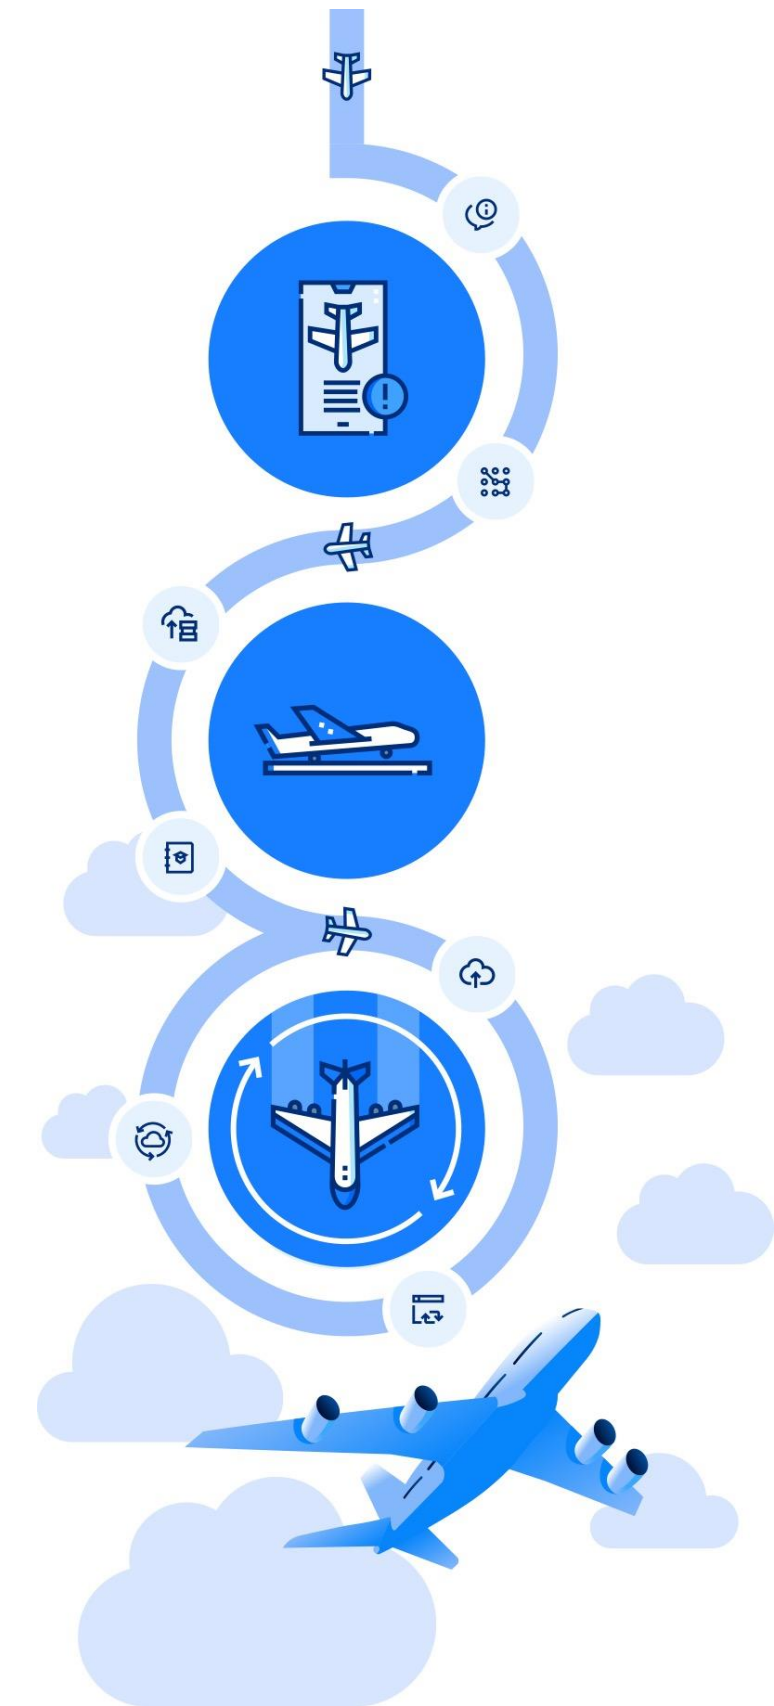

Azure X-Ray

Receive regular insights through customised reports, with improvement points in terms of cost management, security, performance, availability, and more.

Azure Knowledge Center

We also offer training and workshops to further support you in future projects. This can include both technical support and strategic guidance.

Cloud Center of Excellence

03 Succeed

In this phase, you are already flying in the cloud, with a fully operational environment within Azure. With the help of proactive monitoring, we continuously work on further optimizing this environment. This ensures you always maintain the highest security standards and prevents you from paying more than necessary for your actual consumption. Therefore, you unlock the full potential of your cloud investment.

What	Identification of new workloads
Deliverables -	Recurring reports

Infra/Network Monitoring

Receive complete peace of mind with active monitoring, management of infrastructure and network performance. In this way, you have a scalable IT environment, where we can proactively and dynamically manage your computing needs.

Here, we monitor the functioning of your virtual machines, network components, and other key IT endpoints. We identify potential issues at an early stage, so we can act proactively and minimise downtime.

Azure X-Ray

Regularly gain insights through custom reports on the Azure platform, with improvement points in terms of cost management, security, performance, availability, and more.

Azure Knowledge Center

We also offer training and workshops to further support you in future projects. This can be both technical support and strategic guidance.

The technical workshops cover a range of topics like Azure OpenAI, DevOps, data management, automation, security, and much more. These educational sessions are provided by our experienced cloud experts and are designed to deliver practical, immediately applicable knowledge.

As your business grows and transforms, we adapt alongside you. Therefore, we can continue to think strategically about new cloud projects to further support your future plans.
