

About us

At Battle Road, we're revolutionizing simulation and modeling for military planning, education, wargaming, and operations. With decades of experience in scalable cloud technology and intuitive, immersive experiences, our team of game & defense industry veterans are the best in the business.

Overview

AtomEngine is a revolutionary planet-scale constructive modeling & simulation platform that's cloud-first and distributed, purpose built for large scale, multiplayer simulations.

AtomEngine allows users to zoom from street level to orbit and back in one smooth interaction, so they can engage at the level that's most relevant to their scenario.

With integrated AI, accurate terrain, real-world phenomena, and environmental awareness, every AtomEngine entity looks, behaves, and interacts the way that it should in the real world - so you don't need to start from scratch when designing and running new scenarios.

AtomEngine runs natively in a browser providing access via low-end hardware with only a link and a log-in.

Built on a zero-trust architecture, deploy AtomEngine directly to the cloud, client hardware, on edge computing infrastructure, and even air-gapped environments.

AtomEngine Enables

- OPLAN Development
- Military Education
- Future Force Planning
- Field Operations
- COP Integrations
