

One Platform, Endless Possibilities

by **CyanGate**

About OneTeg

OneTeg is a no-code iPaaS solution allowing media transcoding and easy integration between different systems. Its primary focus is enabling easy integration between different **Digital Asset Management (DAM)** systems and digital media distribution platforms and databases.

OneTeg brings flexibility and agility to operations, handles the configurable content and data flows between applications, flexible deployment methods including cloud, On-Premise and Hybrid.

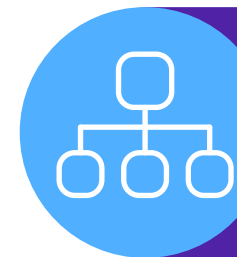

Business Value

Today corporations have numerous applications that are connected via custom integration. In many cases, these are complex **and expensive to maintain.**

OneTeg is designed to streamline the connectivity, simplify integration, reduce complexity, and eliminate one-time migration processes using standard Connectors & Flows.

The **Connectors** and **Flows** are designed to be configurable, extendable, and easy to use. OneTeg is infrastructure agnostic, so it can run on the cloud, on-prem, or as a multi-tenant SaaS.

Value Drivers for Your Organization

Simplify Integration between systems with out-of-the-box Connectors

Bring agility to your business and eliminate complex point-to-point integrations

Save time & money on building and maintaining custom code

Infrastructure agnostic with no-code integration

Reduce architecture complexity & empower quicker decisions

Quicker time-to-value

How does it work?

Core Connectors

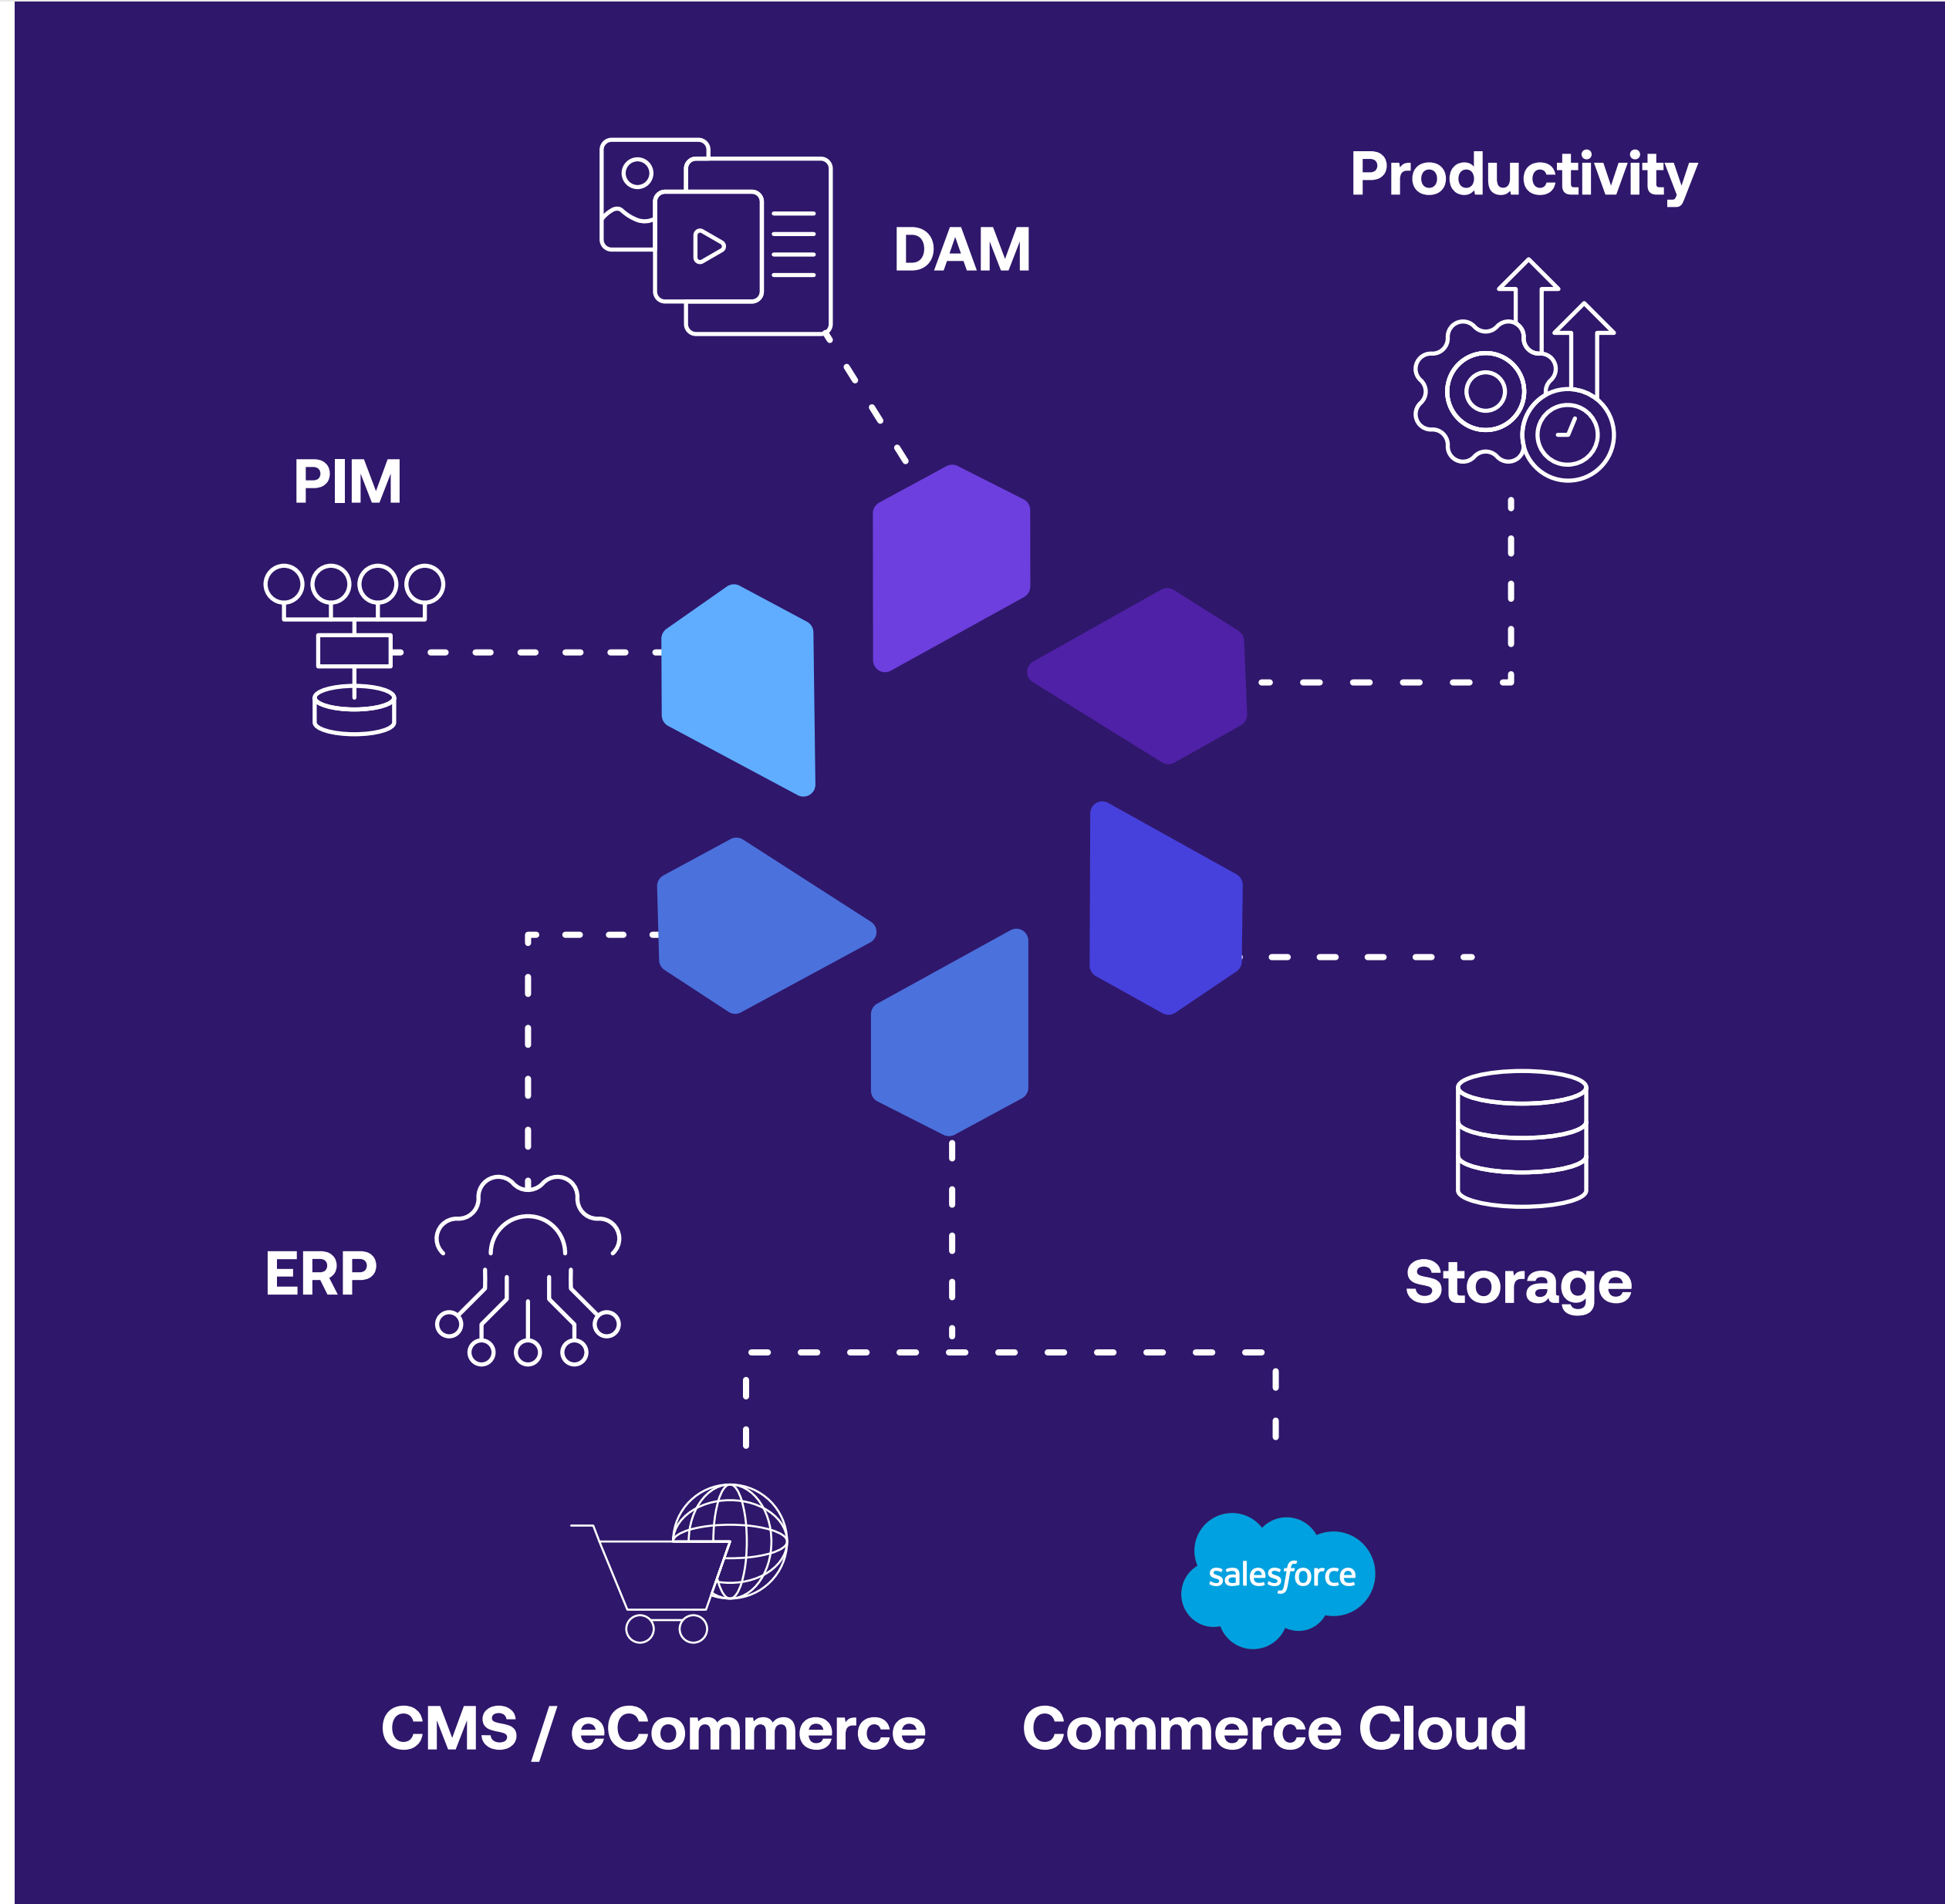

Connect your back-office productivity, storage, transformation & other business applications and connectors, such as FTP, Amazon S3 and Google Sheet.

Prime Connectors

Connect to marketing, sales and ecommerce systems including specialized business applications such as DAM, PIM, CMS and more.

Connections & Flows

Configurable Flows to connect content and data between applications to drive data orchestration.

Standard Integration

Point-to-point custom integration

Upgrade dependencies
across systems

Longer development time

Longer migration time

High maintenance cost

Unpredictable completion time

OneTeg

 Simplified content flow

 Reduce upgrade dependencies

 Centralized integration point

 Flexibility when adding new
integrations

 Better estimation for development time

 Be able to take on more projects
