

CloudSaver Tag Manager

Your SaaS solution to effective tagging

Tags are powerful. Leveraging all that tags can do for you is even more powerful. Comprehensive tagging opens the door to a vast array of possibilities. Thorough and thoughtful tagging can make a company more efficient and more informed. Tag Manager is the key that unlocks the door.

Cloud Cost Management

Resource visibility enables resource and cost management. Use Tag Manager Tag Intelligence, tag policies, real-time synchronization, scheduling, and virtual tags to effectively manage your cloud costs.

Security

Tag Manager provides continuous correction of improperly tagged resources, automated corrections at scale, and automatic tagging of resources at deployment, effectively closing security gaps.

Governance

Your team can leverage Tag Manager tag policy management, powerful query engine, integrated log research, and resource assignment to successfully manage cloud activity.

Automation

When your resources are exhaustively tagged, you can create a myriad of automatic deployment actions on keys and values for maximum efficiency. Automation is virtually unlimited.

Performance

The performance and efficiency of your cloud application workloads (CAW) are enhanced when you can optimize against known industry benchmarks and standards.

KEY FEATURES
