Data Integration

Data integration refers to the process of combining and harmonizing data from multiple sources into a unified, coherent format that can be put to use for various analytical, operational and decision-making purposes.

- ✓ Data Source Identification
- ✓ Data Extraction
- ✓ Data Mapping
- ✓ Data Validation and Quality Assurance
- ✓ Data Transformation

The main purpose of data integration is to provide users with a comprehensive and consistent view of data that may be scattered across various databases, systems, or formats.
