

HCL Accelerate

Deliver Better Software, Faster

HCL Accelerate provides visibility into the entire software development lifecycle process to enable faster delivery times. The platform integrates with different tools within the DevOps toolchain and gathers insights, identifies bottlenecks, and automates release processes by bringing all DevOps data together.

Benefits & Value

Accelerating Software Delivery: HCL Accelerate analyzes data from your entire DevOps toolchain to manage metrics like cycle and lead time, deployment frequency, and flow while identifying bottlenecks that cause long delays.

Ensuring DevOps Visibility: Connecting your entire DevOps toolchain provides insights into every team and product across the organization, regardless of their methodology, governance, and toolset.

Operationalizing Governance: Compliance becomes second nature with automated and manual governance capabilities that build governance requirements into engineering workflows.

Reducing Costs & Growing Revenue: Grow your revenue with insights into IT's impact on business value with end-to-end visibility of your entire development pipeline.

Making teams faster: Automate traceability, remove manual work, and identify bottlenecks that slow down delivery. Always have a pulse on development and ditch the status update meetings to dedicate time to high-impact meetings.

Achieving Business Goals: Keep your enterprise teams coordinated and on track with increased collaboration, project visibility, and better resource management.

Capabilities

- **Value stream visualization:** Leverage your value stream with fully interactive, customizable, real-time value stream mapping and visualization that makes work measurable.
- **Data-driven optimization:** With this unprecedented view into your DevOps data, you can make better decisions for budgeting, releases, and strategy through flexible dashboards and reports.
- **Pipeline and release orchestration:** Achieve continuous delivery at your pace by leveraging HCL Accelerate's cross-application pipeline and release management features to define delivery patterns that are automatic, on-demand, or somewhere in between.
- **Automated governance:** Integrate quality and security data, such as HCL ASoC application vulnerability policies, into your CI/CD pipeline with smart gating logic using robust rule criteria.
- **Customizable for your toolchain:** No matter the combination of SDLC tools, HCL Accelerate can handle it with our free and expanding plugin ecosystem. Do not see a report, metric, or plugin required for your team? Then utilize our expansive API and toolkit to import data through a custom metric or build-your-own plugin.

About HCL Software

HCL Software, a division of HCL Technologies (HCL) develops, markets, sells, and supports over 30 product families in the areas of Customer Experience, Digital Solutions, DevSecOps, and Security and Automation. HCL Software is the cloud native solution factory for enterprise software and powers millions of apps at more than 20,000 organizations, including over half of the Fortune 1000 and Global 2000 companies. HCL Software's mission is to drive ultimate customer success with its IT investments through relentless product innovation. please visit www.hcltechsw.com
