

Eliminate wasted spend from slow service, downtime and idle contracts

Modern Workplace

ERP / CRM

Cloud Services

Hortium has delivered:

79% increase in user adoption of customer

\$1.4m savings in resource, licence and IT costs

15-month time saving on transformation projects

78% saving on first time truck rolls

In a climate where digital transformations are failing, adoption of new technology is slow and the cost of downtime is unclear - Hortium provides an alternative solution.

We shine a light on wasted money from downtime, slow service and idle contracts in ERP, cloud services and the modern workplace.

We simplify the complexity in the technology supply chain, allowing companies to increase productivity, deliver better experiences and waste less budget by reducing the amount of staff sent out on investigations.

We've helped global FTSE and Fortune brands and household names to insure their IT investments with our proven system that is secure, scalable, SaaS, AI and automated.

**It's time to find out what's slowing your technology productivity... Hortium does just that.**

Most companies have a linear snapshot of application service.

We know that every aspect of service needs to be measured and tested continuously to understand service context and performance.

Companies should know what service they're getting vs what they're buying, be able to consistently evaluate investment vs productivity and be able to hold the right people accountable when service underperforms.

## How does it work?

### Hortium Beacons

Hortium gives you constant, up-to-date, service testing for any application or service

It is a secure, automated, scalable platform that works across multiple environments and geographies.

#### Our software beacons:

1. Alert you to poor performance, service and downtime
2. Simulate what a user does, only over thousands of scenarios at once to proactively find problems fast
3. Adapt to any changes made across the entire service environment in real time, applying new testing logic

## Who is Hortium?

Hortium is an award-winning company that protects IT service productivity by showing companies service underperformance, spend vs value metrics and assigning accountability to the correct people.

We use innovation to allow organisations to take back control of their investments in technology and services.

**“We are engineers, problem solvers and IT experts who see the amount of time, money and resources being allocated to inefficient IT. We hate wastage, especially when it’s so unnecessary.” –Amar Nandha, Founder and CEO**
