

Modern Workplace Management

Analytics and Reporting

HORTIUM

Hortium allows you to:

Give control back to IT teams, allowing them to develop best practices and benchmark output

Identify issues before they affect your users

Measure end-to-end workplace analytics from adoption to engagement and effectiveness

Understand the value and ROI of your services

Modern workplaces should fuel the productivity of your end-user

Real-time services and apps can be challenging for IT teams, but are necessary as cloud services work is 5x more likely to result in higher employee performance and output.

But bottlenecks and missteps using technology and enterprise apps can lead to errors and inefficiencies that negatively impact productivity. Users need to get the most out of their digital experiences without sacrificing service experience, resources, compliance and control.

Hortium's modern workplace solution provides users with the data and analytics that they need to empower better service, closer collaboration, more creativity and quicker decision making.

A good and stable service experience is key to keeping your users happy.

Hortium is a flexible platform, adapting to changes in resource demands and monitoring the entire digital experience to guarantee an improved end-user experience.

Using workplace analytics to drive organizational efficiency

Companies can use workplace analytics to improve productivity, ensure app services are used correctly, and prevent frustration and fatigue using company-mandated software.

Workplace analytics enables businesses to use data from cloud-based platforms to identify patterns that impact productivity and workforce effectiveness.

Workplace analytics help to:

- Improve decision-making
- Identify communication and training opportunities
- Facilitate culture change
- Mitigate security risks
- Extend the value and productivity of employees and their services

An all-encompassing end-to-end (user) management strategy is needed to control end-users' happiness, from devices to business applications to the digital workplace. Monitoring and predictive analysis can help scale up workspaces and update applications without affecting availability.

IT teams must focus on multiple overlapping platforms and interactions to ensure the cloud service and app environments deliver a positive experience. This challenge is compounded by the fact that IT needs to be directly managing some of these business-critical technologies.

Hortium is a cloud-based app platform that enables IT teams to measure end-to-end workplace analytics.

Eliminate wasted spend from downtime and slow service across your entire digital value chain
