

Application Development

Zure designs, creates and maintains your Azure applications.

Zure handles the complete application lifecycle from concept design through application development to application support and everything in between.

The applications are built by using field proven Azure Platform as a Service technologies with modern architecture choices, design and DevOps practices.

THE PROJECT

- An experienced Azure development team with optional skills to help your product management, business concepting, design, QA, platform governance, security and support.
- Requirements are managed through lean project management practices, translating to the team doing design and implementation in 2-week development iterations according to a prioritized task list
- It is the responsibility of a product owner and the team together to design, prioritize and commit to every 2-week iteration

THE PURPOSE

- To build and run usable and scalable application in modern, dynamic environments
- To enable loosely coupled systems that are resilient, manageable, and observable
- To make high-impact changes frequently and predictably with minimal effort

NEXT STEPS

- Maintain and improve your application with Zure's continuous services
 - Ensure your Azure platform cost efficiency, manageability and security with Zure's Managed Azure and consultancy services
 - Zure provides expertise and the required SLAs up to 24/7 service if required
