

Copilot for M365 Adoption Accelerator

The Adoption Accelerator Engagement is a unique opportunity for organizations ready for the transition to an AI-organization. Our experts will provide you with a secure implementation and successful adoption of Copilot for M365 targeted to your high-value scenarios. This rapid, yet thorough, program empowers your organization to enhance their productivity and leverage AI in a meaningful way.

Implementation & Adoption Plan

Build & Deploy

Communicate, Train, & Support

4 – 6 months

Assess and Plan

Assess your organization's security controls related to data, devices, identities, and mobile apps. Identify risks and plan for the implementation of enhanced security controls for a secure Copilot deployment. Define areas for content migration and custom copilot plugins to ensure a great Copilot user experience that meets your organizations goals.

Prepare and Deploy

Leveraging the identified areas of focus during the Assess and Plan phase, we configure the appropriate security controls, migrate the relevant data, and build and publish custom Copilot plugins, as necessary. We test to guarantee quality and work with stakeholders to confirm goals are met and approved for use within the organization.

Drive Adoption

Create Adoption Plan focused on high-value use cases and training and communication strategies outlining the goals, objectives, audience, messages, channels, and success metrics. Execute the Adoption Plan by building the CoE, training early adopters, delivering rapid training, and monitoring & reporting to make verify the adoption of Copilot for M365 is successful.
