Dataring Bridge

odataring
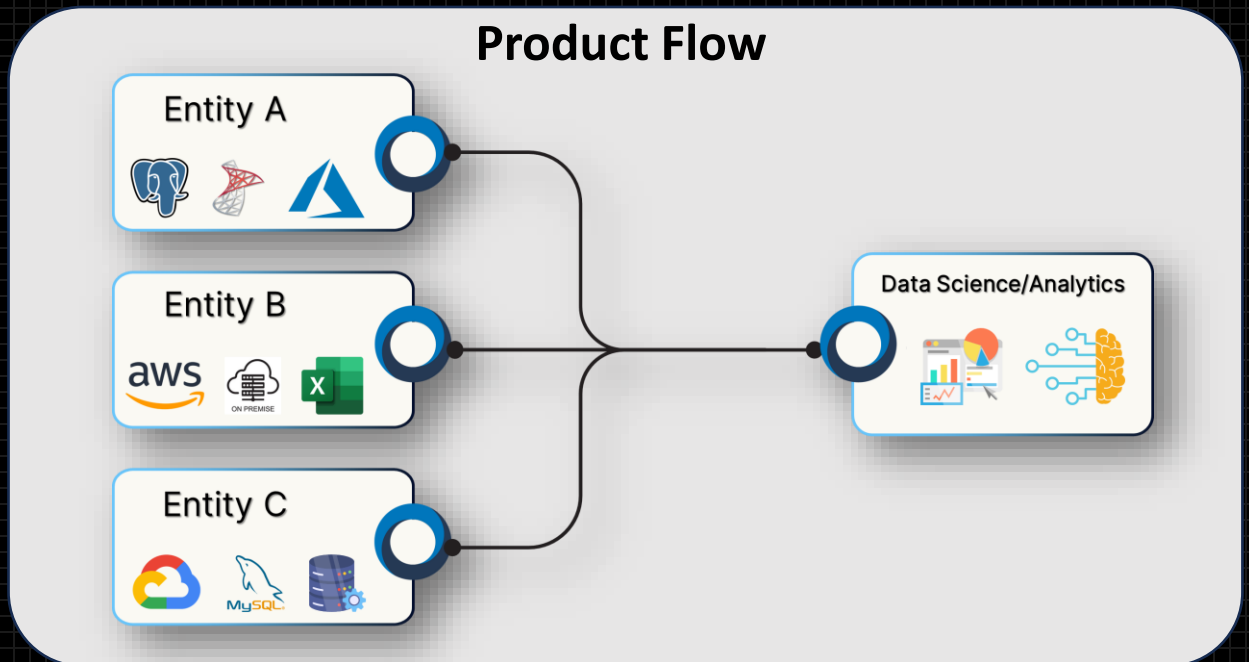

Enable Zero Copy Data Collaboration Regardless of Source

Dataring Bridge is a zero-copy data collaboration platform that makes data sharing and analysis between businesses easy, secure, and efficient, regardless of the cloud, database, or tech stack. The platform enables analytics or AI from multiple external entities and to collaborate securely and compliantly **without expensive and complex data pipelines.**

Product Flow

A single endpoint can be used to access data across connected databases, via ANSII SQL or REST APIs.

Endpoint acts as a data proxy for users to connect to external data stores.

Organizations can share specific datasets or create data rooms for access to any number of external clouds.

Sample Query :

```
SELECT
aws.postgres.userTable.name,azure.mysql.customerTable.prodName,...
FROM aws.postgres.userTable
INNER JOIN azure.mysql.customerTable
ON aws.postgres.userTable.name =
azure.mysql.customerTable.customerName;
```

Query that joins data from PostgreSQL & MySQL from AWS and Azure respectively executed on the Dataring Bridge Platform
