

Zure AI Enterprise Search

Build a ChatGPT-like experience for using your enterprise data with the Zure AI Enterprise Search.

Organizations and their employees face significant inefficiencies from lost or hidden information. This affects every level of the organization fostering frustration and negatively affecting business success and employee satisfaction.

With Zure's AI Enterprise Search your organization can implement our secure solution to solve this problem by enabling AI-powered access to the most common forms of organizational data.

Zure AI Enterprise Search

- The solution provides a natural language access to organization's siloed data and knowledge for all enterprise actors, as well as an internal ChatGPT access without fear of prompts or answers going public
- The siloed data can be anything located in data platforms, databases, documents or any indexable data store such as CRMs, ERPs or PLM systems
- The solution is used via a Teams Chatbot or a web UI
- The solution considers governance, GDPR and data access to provide secure and compliant data access

Project

- A capability to discover information in enterprise documents and files
- Integrate with and index the data in various data sources
- Customized user interface to provide a brand-compliant look and feel
- Prompt engineering to configure the chat behaviour

Next steps

- Implement AI Enterprise Search for your organization with a one-month MVP project delivered by a small team of Zure experts
