

Identity and Secure Access

Provide authorized and secure access to your network with our identity and secure access solutions

How important is ensuring the identity and security of those who access your data?

Ensuring secure access and identity verification has never been more vital in today's data-driven world. High-profile data breaches have shown us the catastrophic damage these incidents inflict on businesses and their brand reputation.

With OneNeck[®] IT Solutions, you can secure your data and solidify trust in your brand. We focus on one of the fundamental aspects of IT security – confirming authorized resources and ensuring secure data access. Benefit from our industry-leading tools and expertise to create an impenetrable shield for your content, protecting you from potential threats and breaches.

OneNeck leverages top-tier industry tools to ensure secure, authenticated access for your on-site and remote workforce. Our security experts will evaluate your unique business and technical needs, crafting a comprehensive solution for identity verification and secure data access.

Device and User Identification

With expanding networks, mobile workforces and integrated partners, data vulnerability is at an all-time high. OneNeck's experts devise comprehensive solutions for user and device authentication and secure access, tailoring to your specific needs. Know your system users, their authentication methods, and their access capabilities to safeguard your data effectively.

Authentication and Authorization

Whether you need to authenticate users in-house, wirelessly or via VPN, OneNeck will guide you in selecting the correct authentication solution and provide complete deployment services so you know your systems are set up properly. Some of our access solutions include:

- Active Directory and LDAP directory services
- PKI certificate solutions
- 802.1x, Kerberos, RADIUS, TACACS+ authentication protocols
- Single Sign-On (SSO, SAML, and Dual Factor Authentication)

OneNeck Services

- Identity and secure access consulting, technology strategy workshops and solution development.
- Identity and secure access solution design and implementation for Cisco ISE and complementary products.
- OneNeck managed services for network and security infrastructure.

About OneNeck® IT Solutions

OneNeck IT Solutions LLC specializes in multi-cloud solutions, combined with managed services, professional IT services, hardware and local connectivity via top-tier data centers in Arizona, Colorado, Iowa, Minnesota, New Jersey, Oregon and Wisconsin.

OneNeck's nearly 500 technology professionals deliver secure, modern platforms and applications for organizations embracing data-driven transformation and secure end-to-end solutions.

Policy Based Access

Our solutions offer the necessary visibility and context-aware access for user sessions. Achieving control via ACLs, they protect layers 4-7 considering device type, user, location, posture status, or IP address. Our experts will collaborate with you to design and implement authentication and authorization solutions fitting your environment.

Compliance

To meet compliance via well-defined security policies, you need to understand your data access dynamics. Our experts assist in outlining configuration requirements, ensuring your compliance readiness. Adhering to current standards necessitating multi-factor authentication and user-specific controls, OneNeck delivers advanced identity and access management, fully integrated with your network and policies..

Pricing and Scope

Pricing is based on the size of the customer environment and specific customer requirements. This can include the number of sites, wireless versus wired end-users, type of devices, security features such as PKI or dual factor authentication and many others. OneNeck's security experts will customize engagement based on your existing environment and your specific needs.

The OneNeck Difference

Efficiency thrives when technology aligns with business needs. At OneNeck, in conjunction with industry-leading partners such as VMware, Airwatch, Trend Micro, Cisco, EMC, NetApp, F5, RSA, Rapid7 and Microsoft, we customize intelligent services like identity and secure access systems. This enhances business infrastructure, protects it from threats and fuels growth. Our security engineers, certified in CCIE-Security, CISSP, and GSEC, stay current with the latest security trends and best practices, offering top-tier security for your enterprise.

Keep Moving Forward. We Got Your Back.
