

ODBC for Salesforce

Reliable and simple to use data connector for Salesforce

ODBC API Functions Support | Enterprise-level Features | Safe Connection through HTTPS | Data Conversion Options

About Us

Devart is a software development company specializing in creating database management and data connectivity tools for developers. We offer a wide range of products for Windows, macOS, and Linux, and for various databases, such as MySQL, Oracle, SQL Server, and more.

Some of our popular products include dbForge Studio for MySQL, a MySQL management and development tool, and dotConnect for Oracle, an ADO.NET provider for Oracle databases. The company was founded in 1997 and is based in Prague, Czech Republic.

About ODBC for Salesforce

Devart ODBC Driver for Salesforce is a software component that provides high-performance and secure connectivity to Salesforce data via the Open Database Connectivity (ODBC) interface. With this driver, you can integrate Salesforce data into various applications that support ODBC connectivity, such as Microsoft Excel, Power BI, Tableau, and others. The driver is available for Windows and supports various Salesforce editions and APIs.

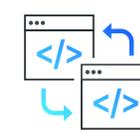

Key features:

fast
data retrieval

secure data
transmission

automatic data
type mapping

support for various
authentication
methods

Getting Started: Installation

Devart ODBC Driver for Salesforce can be installed on various operating systems. This provides users a comprehensive solution for accessing Salesforce data from various computer platforms, including Windows, macOS, and Linux.

[Windows regular;](#)

[Windows silent;](#)

[MacOS;](#)

[LinuxDEB;](#)

[Linux RPM;](#)

Supported Data Types

The Devart ODBC Driver for Salesforce supports a wide range of data types, including both standard and custom Salesforce data types. Some of the standard data types supported by the driver include:

- Text
- Number
- Date/Time
- Checkbox
- Picklist
- Long Text Area
- Currency
- Percent
- URL
- Email
- Phone
- Date

The driver also supports custom Salesforce data types, such as custom picklists and custom objects, as well as multi-select picklists and geographic location data types (e.g. address, city, state, and zip code). The driver automatically maps the data types to the equivalent data types in the target application, ensuring seamless integration with the application.

Connecting String Options

The [connecting string options](#) are the parameters used to specify the connection details when connecting to Salesforce data using the Devart ODBC Driver for Salesforce.

These options can be specified in the connection string passed to the ODBC API when establishing a connection to Salesforce data. The specific syntax for the connecting string options may vary depending on the target application and the ODBC API being used. The Devart ODBC Driver for Salesforce documentation provides detailed information on how to specify the connecting string options for your specific use case.

Enabling ODBC Tracing

The process allows you to capture detailed information about the communication between an application and the Devart ODBC Driver for Salesforce. [This information](#) can be useful for troubleshooting issues with the driver, such as connectivity problems, performance issues, or data retrieval errors.

Connecting to Salesforce from Excel using ODBC Driver for Salesforce

To connect to Salesforce data from Excel using the Devart ODBC Driver for Salesforce, you need to perform the [following steps](#).

Once the data is loaded into Excel, you can manipulate it, analyze it, and create charts and reports based on the data. The Devart ODBC Driver for Salesforce provides a high-performance and reliable solution for accessing Salesforce data from Excel, allowing you to get the insights you need to make informed business decisions.

Connecting Power BI to Salesforce via ODBC Driver for Salesforce

1

Install the Devart ODBC Driver for Salesforce on your computer.

2

Open Power BI Desktop and click on the "Get Data" button in the Home tab.

3

In the "Get Data" window, select "ODBC" from the list of data sources.

4

Select the Devart ODBC Driver for Salesforce from the list of available drivers and click Connect.

5

Enter the connection details for the Salesforce server, such as the server name, port, and login credentials.

6

Test the connection to make sure that it is working properly.

7

Select the data you want to import into Power BI, either by selecting tables or writing a custom SQL query.

8

Configure the import options, such as the query folding and load type.

9

Click the "Load" button to import the data into Power BI.

As soon as the data is loaded into Power BI, you can use the powerful data visualization and analysis tools to gain insights into your Salesforce data. With the Devart ODBC Driver for Salesforce, you can connect to Salesforce data quickly and easily, creating meaningful reports and dashboards that help you make informed business decisions.

Connecting Tableau to Salesforce via ODBC Driver for Salesforce

1

Install the Devart ODBC Driver for Salesforce on your computer.

2

Open Tableau Desktop and click on the "Connect" button in the start page.

3

In the "Connect" window, select "ODBC" as the data source.

4

Select the Devart ODBC Driver for Salesforce from the list of available drivers and click Connect.

5

Enter the connection details for the Salesforce server, such as the server name, port, and login credentials.

6

Test the connection to make sure that it is working properly.

7

Select the data you want to import into Tableau, either by selecting tables or writing a custom SQL query.

8

Configure the data source options, such as the aggregation type, data granularity, and data refresh schedule.

9

Click the "Connect Live" or "Extract Data" button to import the data into Tableau.

When the data is loaded into Tableau, you can use the intuitive and powerful data visualization tools to create interactive dashboards, reports, and visualizations that help you gain insights into your Salesforce data. With the Devart ODBC Driver for Salesforce, you can connect to Salesforce data in a fast, reliable, and secure, enabling you to make informed business decisions based on your data.
