# DataGalaxy

The Data Knowledge Workplace

DataGalaxy is the industry's first data catalog and knowledge platform delivering data culture and literacy across 110+ leading brands.

DataGalaxy bridges the gap between business & IT. User-friendly and intuitive, DataGalaxy delivers a proven ROI-driven alternative to traditional data governance tools that lack adoption.

DataGalaxy's interactive column-level lineage highlights impacts and causes along the data factory

Share the data knowledge

Business teams need **lightning-speed access** to insightful, trustable, and understandable information. DataGalaxy makes your data knowledge **easy to discover**, **search**, and **share**. Users can visually explore the data factory down to the column level with **interactive lineages** and **diagrams**. Get information directly from your **work environment** (Teams, Slack, Jira, Chrome, and Edge) to ensure your data knowledge is perfectly synchronized with your team's daily tools.

Manage & design
## the data knowledge

Data Product teams need automation, productivity, and customization. Our **AI data steward Metabot** performs tedious or repetitive tasks so your data team can focus on high-value tasks like animating teamwork and collaboration, curating data sets, or designing the future of your data stack. DataGalaxy's meta-model and assets layouts are **customizable** and **extendable**.

Scan the data knowledge

Data Ops teams can select from over **70 connectors** — and more every week — for **modern** and **legacy data stack tools** to ensure real-time cataloging and data observability. For deeper and custom integrations, DataGalaxy's **knowledge graph** is fully open with an extensively **documented API** and a rich **Python SDK**.

Chrome & Edge extensions for a faster access to your data knowledge

Automatically catalog your data assets from 70+ mainstream technologies or customize your integration with our API or Python SDK
