

# F5 NGINX for Azure

Powering the world’s busiest websites, NGINX is now available as a native SaaS offering that lets you deliver high-performance applications on Microsoft Azure. The solution is tightly integrated with Microsoft Azure enabling swift adoption of cloud and rapid deployment of apps on Azure.

## What Do We Offer?

NGINX for Azure enables enterprises to seamlessly lift and shift apps to Azure cloud using existing NGINX configuration as well as build new cloud-native apps. With NGINX for Azure, enterprises can achieve consistency in performance and security across their estate of on-prem and Azure cloud apps using the trusted and familiar load balancing solution, NGINX. With NGINX for Azure, you will be able to:

### Simplify cloud migration and adoption

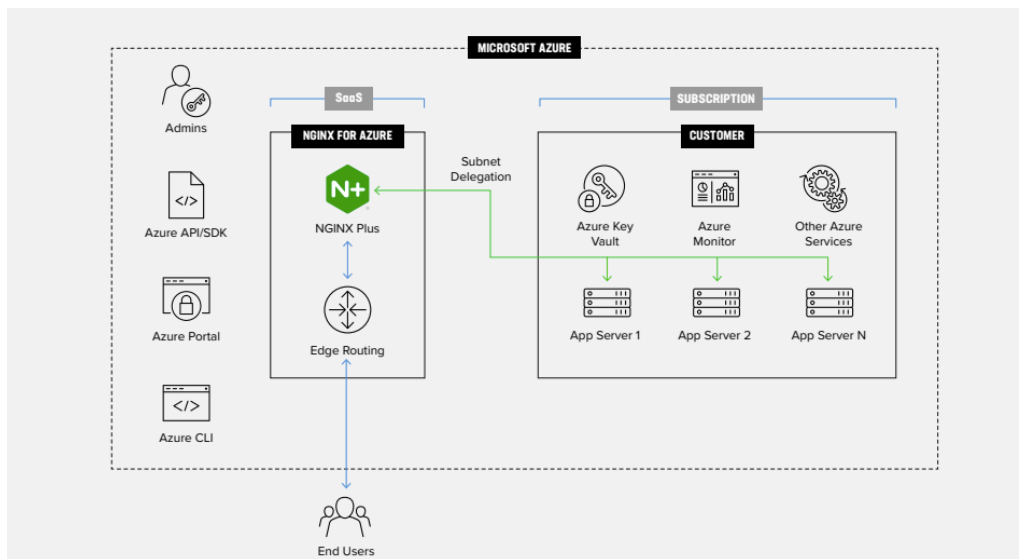

- Seamless lift and shift experience of your existing NGINX configuration to allow you to migrate or extend your workloads to the cloud with minimal effort

### Deploy advanced traffic management capabilities

- Authenticate and authorize users and client applications with JWTs
- Ensure reliability with active monitoring of your applications with active monitoring and health checks

### Integrate easily with the Azure ecosystem

- Azure Key Vault for certificate management and Azure Monitor for app insights • Consumption-based pricing to align infrastructure costs to actual usage

## Documentation and Support

Visit our documentation site to learn how to deploy, manage and troubleshoot NGINX for Azure:
