

Preventive Service for Microsoft Entra ID

Security Services

Module for Entra ID

In this preventive, informal assessment, we examine how well the Microsoft Entra ID environment is equipped to defend against attacks. This is based on our experience from projects, operations, and incident response.

The objective and result of this package is to identify concrete measures to protect Microsoft Entra ID from compromise and to provide information for emergency plans, in addition to offering a detailed assessment of the situation.

Contents of the package

- Interview-based assessment of architecture, tools, operations, and selected configurations.
- Manual assessment for detailed testing of the environment, including vulnerability assessment.
- Creation of a report with classification. Prioritization and remediation recommendations

Topics of the assessment

- Hybrid Identity and Tenant-Level Configuration
- Identity Lifecycle
- Identity Security
- Zero Trust Implementation
- Operational Excellence and Security Operations
- Privileged Identity and Access Management
- App Integration and Workload Identities

Contents of the package

This preventive assessment evaluates how well the Microsoft Entra ID environment is prepared against attacks. This is based on our experience from projects, operations and incident response.

Interview

Interview on architecture, tools, operational processes, and selected configurations.

2x ~2 Stunden

Assessment

Manual assessment for detailed testing of the environment, including evaluation for vulnerabilities.

Report

Creation of a report with classification. Prioritization, as well as recommendations for action and discussion of the results.

The goal and outcome of the package is to determine the current situation and to identify concrete measures to protect the Entra ID environment from compromise and to provide guidance for contingency plans.

Microsoft Entra ID Security Review
