

Managed Industrial Security [detect]

Reduce the operational risks of your IT & OT connectivity.

The Digital Transformation is deeply changing business, and cybersecurity is key enabler to succeed in this journey.

Reducing the operational risks of IT/OT connectivity entails a different number of challenges, like building threat detection capabilities for OT environment without causing operational risks, or understanding security events, their impact on OT environments and focus on what really matters. Adding to this, the general lack of resources and skills to understand OT risks and security events and alerts is causing businesses to turn to security partners in order to outsource a part of their digital transformation journey.

At Orange Cyberdefense, we help you secure the digital transformation of your business with **Managed Industrial Security Services that will allow you to extend Threat Detection to OT.** We effectively combine the best technology, processes, and people in order to grant you the best level of service. Our Managed Services are delivered on the Orange Cyberdefense Fusion Platform where our experts analyze, prioritize and handled OT Asset Data and Security Events.

Our promise to you:

Reduce operational risks and protect sensitive data by extending Advanced Threat Detection & Response to OT & IT.

Detecting threats across your OT environments

Key benefits

Detection of OT threats

Monitoring of your OT networks for threats.

Reduction of noise

Continuously tuning your operational baseline.

Event Investigation

Support from OT experts to handle your security events.

Response Support

Recommendations to take the right response actions.

OT Experts on hand

Specialized OT service delivery teams.

Market recognized
