

# Microsoft Sentinel

Modernize security operations and focus on what matters most with cloud-native SIEM, enriched with AI.

Microsoft Sentinel is a cloud-native security information and event management (SIEM) platform that uses built-in AI to analyze large volumes of data across an enterprise—fast. Microsoft Sentinel aggregates security data from all sources, including users, applications, servers, and devices running on-premise or in the cloud. By eliminating on-premises infrastructure, it lowers costs by 48% compared to legacy SIEMs, as found by the commissioned [Forrester Consulting Total Economic Impact™ of Microsoft Sentinel](#) study. What's more, it reduces alert fatigue by 90% with machine-learning (ML) and analytics. With Microsoft Sentinel, your team can focus on what matters most: protecting your organization.

## How D3 Smart SOAR integrates with Microsoft Sentinel

Smart SOAR ingests and centralizes alerts from Microsoft Sentinel, along with all the relevant contextual data. Smart SOAR runs Microsoft Sentinel alerts through its Event Pipeline to automatically normalize, correlate, and triage the alerts, and then uses incident-specific, automated playbooks to take rapid action against threats via the bidirectional integration, any actions taken in Smart SOAR can update in Microsoft Sentinel, keeping the two tools in sync.

## Customer Benefits

- Consolidate all alerts into a single queue with comprehensive case management.
- Normalize alerts in Smart SOAR from your SIEM, EDR, network, email, and identity tools so you can analyze the artifacts and patterns between them.
- Connect Microsoft Sentinel with the rest of your security tools to make the most out of your data.
